

RISCO

A LIFETIME OF SECURITY

RisControl Controller for Alarm & Smart Automation

Enhanced Security.

Convenient Living.

Wise Energy Management.

RISCO presents a new and unique proposition: a powerful, professional, certified hybrid security solution, fully integrated with smart home and video – RisControl: Controller for Alarm & Smart Automation.

By offering this new advanced solution, installers can now provide their customers with a more comprehensive level of protection and convenience, benefiting from perfect compatibility with hundreds of Z-Wave smart automation devices.

Your Market Challenge

- Today's consumers are becoming smarter. They are looking for a higher level of protection and convenience. As a security installer, you need to keep pace with these expectations to ensure customer satisfaction and retention.
- With rapid advancements in technology, there are more companies and individuals offering alarm installation services than ever before. This can make it difficult for you to stand out and differentiate yourself in the market.
- You need to stay up-to-date with the latest products and services to remain relevant and competitive, whilst delivering real value using advanced technology.
- Therefore, a good option is for you to introduce new market segments and new products.

RISCO's Solution

The RisControl Controller for Alarm & Smart Automation offers an exceptional opportunity to take advantage of such seismic shifts in consumer-driven technology advances:

- 8-inch touchscreen smart automation & security controller and keypad
- Intuitive user interface, easy to use, easy to setup, easily customised to the user's preferences
- Compatible with RISCO's hybrid security solution – no compromise on security
- Alarm and video surveillance (cameras and NVR) – for extra security and convenience
- Easy to setup rules and scenarios – without the need for a PC/laptop
- Compatible with hundreds of Z-Wave devices
- Adding a moderately priced integrated smart automation solution delivers a home or business management system with endless possibilities
- Integration - smart devices, rooms, backups and more – are all managed by the ultra-secure RISCO Cloud
- Control of smart automation products is also possible at any time and from any location using the iRISCO app

Your opportunities

Take your offering to the next level – with a user experience that thoroughly protects your customer's property – and so much more. :

New market, new customers

Get access to the fast-growing target audience of smart automation customers.

Significant upsell

You can offer more products and features that fit the customer's needs and increase your earnings.

Enhanced security

The value of integrated alarm and smart home: enhance the security, deter intruders, ensure that the premises secured with preconfigured scenes.

Standout from the competition

You can offer customers a winning smart automation offering without ever compromising on the level of security.

Customer relations

RISCO's advanced cloud technology such as push notifications and remote services, improves your ongoing relationships with your customers.

Life with RisControl

1. Enhanced Security

Enhance your home or business security by combining the best of both worlds – A certified, professional security system, augmented by a wide variety of Z-Wave smart automation devices:

When leaving a home or business, a pre-configured scene can ensure that the building is protected – setting the system, closing shutters, locking the door and more.

In case of detection, for instance by an outdoor detector, the system triggers all the lights to turn on and deter the burglar.

When going on holiday, scheduling the lights to turn on and off at specific times will make burglars believe that the house is occupied.

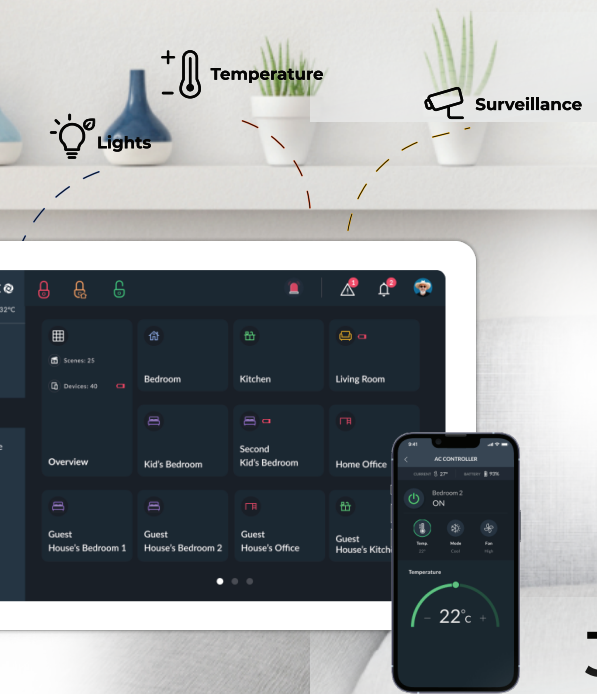

2. Convenient Living

Create an entire security and home/building automation system with a single control panel:

Simplify the daily routine – total home or business management, not just home or business security.

Avoid daily worries by conveniently synchronising the system's smart automation presets according to life habits and schedules.

Use the power of your voice and Alexa to activate devices and scenes.

3. Wise energy management

Many households are today concerned about the cost of energy. Using smart integrated rules for electricity usage will easily reduce your customers' overall energy consumption, such as:

Set a schedule for the thermostat and reduce usage.

Create an automation rule to automatically dim lamps or turn off lights.

Turn off or lower temperatures when leaving home.

Set a schedule for outdoor lighting to turn off at sunrise.

Technical Specifications

Display	8" IPS
Resolution	800x1280
Speaker	8 Ohm / 1W
Wi-Fi	802.11 b/g/n 2.4 GHz
System interface	RS-485
Protection	Wall Tamper
Dimensions	208 x 129 x 24mm
Weight	481g
Operating Voltage	13V \pm 10%
Current Consumption:	13V \pm 10% , 200 mA typical, 300mA max.
Operating Temperature	-10°C to 55°C (14°F to 131°F)
Standard EN50131-3	Grade 3 Environmental Class II, PD 6662:2017
