

**L2 Managed Switch**

**Web-based Configuration Guide**

## About This Document

This product includes two documents as the table below.

Documents	Description	How to get it
Quick Guide	Including product introductions and installation steps.	In the packing box or contact your dealer.
Web-based Configuration Guide	Including Web network management system configuration instructions.	Please contact your dealer.

This document is [Web-based Configuration Guide](#), including Web network management system (short for Web system) configuration instructions. It is intended for engineers or anyone who needs to configure the device by Web system.

The configuration instructions here take Industrial 8-Port Gigabit PoE+ 4-Port SFP L2 Managed Ethernet Switch (VITESSE) as example. If there is inconsistency between the instruction (eg. port number, PoE function, etc.) and the actual product, please refer to the actual product.

## Announcement

The information in this document is subject to change without notice.

The document is only used as operation guide, except for other promises. No warranties of any kind, either express or implied are made in relation to the description, information or suggestion or any other contents of the manual.

The images shown here are indicative only. If there is inconsistency between the image and the actual product, the actual product shall govern.

## Symbol Conventions

The symbols that may be found in this document are defined as follows.

Symbol	Description
 <b>DANGER</b>	Indicates a hazard with a high level of risk, which if not avoided, will result in death or serious injury.
 <b>WARNING</b>	Indicates a hazard with a medium or low level of risk, which if not avoided, could result in minor or moderate injury.
 <b>CAUTION</b>	Indicates a potentially hazardous situation, which if not avoided, could result in equipment damage, data loss, performance degradation, or unexpected results.
<b>NOTE</b>	Provides additional information to emphasize or supplement important points in the main text.

## Change History

Updates between document issues are cumulative. Therefore, the latest document issue contains all updates made in previous issues.

<b>Version</b>	<b>State</b>	<b>Release Date</b>	<b>Descriptions</b>
V1.0	Released	2021-09-09	Initial commercial release.
V1.1	Released	2022-03-25	Add details about PoE Mode.

# 1 Configuration Instruction

To facilitate configuration and the maintenance of the device, the Web system is provided to users. You can log in to the Web system to configure and maintain devices through the graphic user interface (GUI).

The Web-based configuration guide describes the configuration and maintenance of the device through the Web system. It is intended for engineers or anyone who needs to configure the device through the Web system.

## [Web System Overview](#)

The Web system provides the functions as below.

- Information and Status
- Network Admin
- Port Configure
- PoE
- Advanced Configure
- Security Configure
- QoS Configure
- Diagnostics
- Maintenance

Please follow the instructions below to configure the Web system.

## **2 Environments Requirements**

### **2.1 Hardware Requirements**

The management PC recommended as below.

- Make sure the management PC has already been with Ethernet port.
- Use a network cable to connect the Ethernet port of PC and the Ethernet port of the switch.

### **2.2 Software Requirements**

The browser version recommend as below.

- Chrome

### 3 Set Up Network Connection

Before login the Web system to start configuration, users need to set up the network connection as follow steps.

- Set the IP of the PC and the switch in the same network segment. The default IP address of the switch is 192.168.1.200, network gate is 255.255.255.0.
- The port to connect management PC for Web setting must be management VLAN. By default, management VLAN is VLAN 1, and each port of the switch is VLAN1.
- If you need to connect the remote network, please make sure the management PC and the router can do the jobs above.
- This product can't assign the IP address for the management PC, please configure the management static IP manually before web configuration.

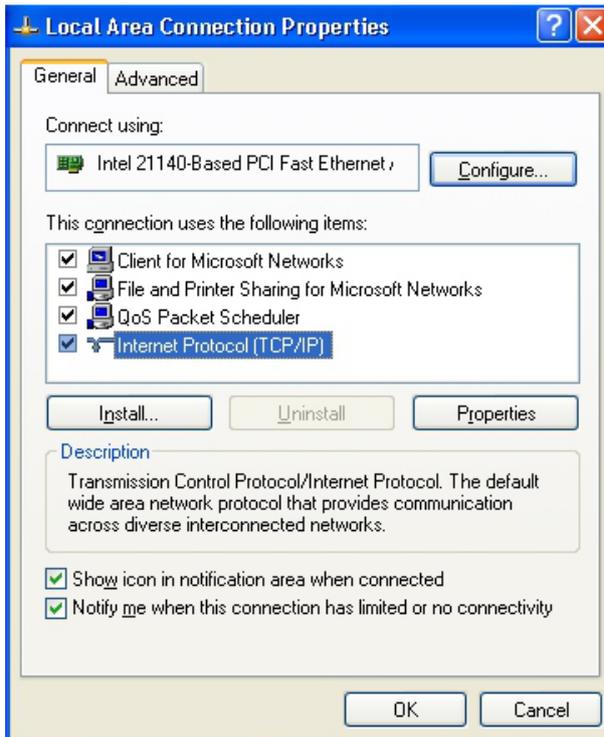

#### 3.1 Set Static IP for the Management Computer

Operation steps (take Windows 7 as sample):

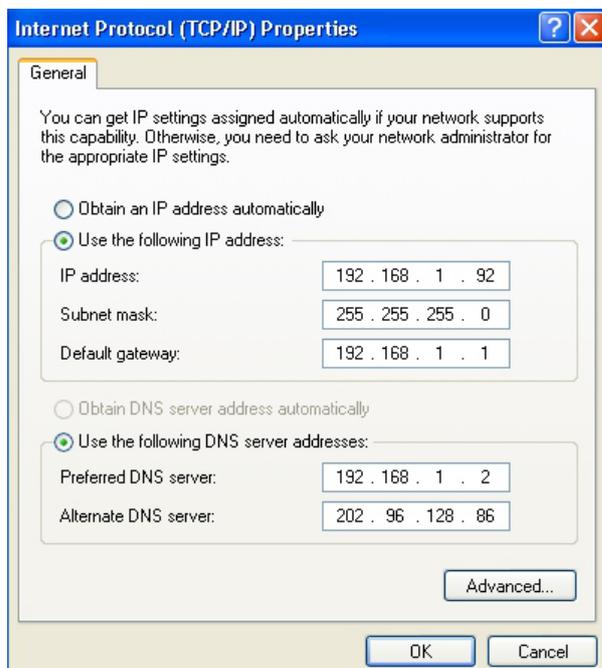

- Click <start> to enter the <start> menu, select “ control panel ”. Double click “ network connection ” icon, then double click the “ local connection ” icon, “ local Area Connection Status ” window pops out.

- Click <property> button, enter "Local Area Connection Properties" window.

- Select "Internet protocol (TCP/IP), click <property> button, enter " Internet Protocol (TCP/IP) Properties " window. Select the option " Use the following IP address ", input IP address (use arbitrary value between 192.168.1.1~ 192.168.1.254, besides 192.168.1.200) and the subnet mask(255.255.255.0).
- Click "OK" to finish the configuration.

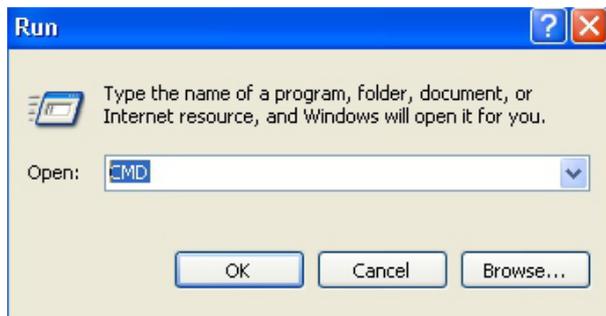

**Note:**

- DNS server address can be empty or be filled in with the real server address.

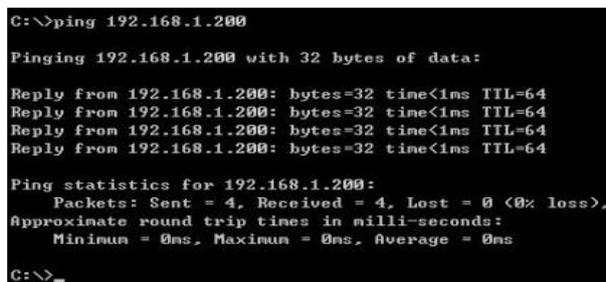

### 3.2 Confirm the Network Connection by Ping Command

Operation Steps as below:

- Click <Start> button to enter <Start> menu, select <Run>, popping out the dialog.

- Input "ping 192.168.1.200", and press enter. If there is equipment response displaying in the pop out dialog, that means network connection succeed, otherwise please check if the network connection is correct.

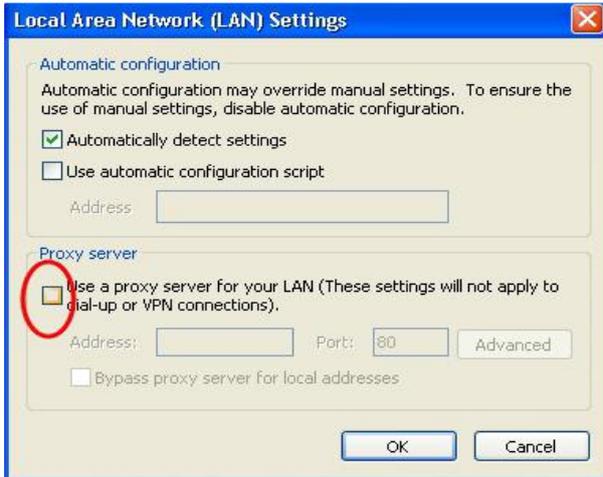

### 3.3 Cancel the Proxy Server

If this management PC uses proxy server to visit the internet, then the proxy service must be prohibited as follows:

- In browser, select <Tool/Internet Option> to enter <Internet Options> window.

- Select “ Connections ” tab in <Internet Options> window, and click <LAN Setting> button.

- Check if the “ Use a proxy server for your LAN ” option is selected. If selected, please deselect the option. Then click <OK> button.

**Note:**

- Please follow the steps to check if the switch is installed correctly:
- Whether the physical connection of the equipment is correct?
- Use network cable to connect the product’s Ethernet port (except the console port) with managed computer network card, and ensure the link LED of the port is on.
- Whether the computer TCP/IP agreement setting is correct?
- Management PC's IP address must be 192.168.1.x (x range is 1~254 and x can't be 200, otherwise it will conflict with the product IP address 192.168.1.200), subnet mask: 255.255.255.0.
- Whether the computer's port VLAN ID is 1?
- By default, the management VLAN is VLAN 1, same as each port of switch.

Now the setting up tasks are finished.

Users can login the Web system and start configuration as following.

## 4 Login the Web system

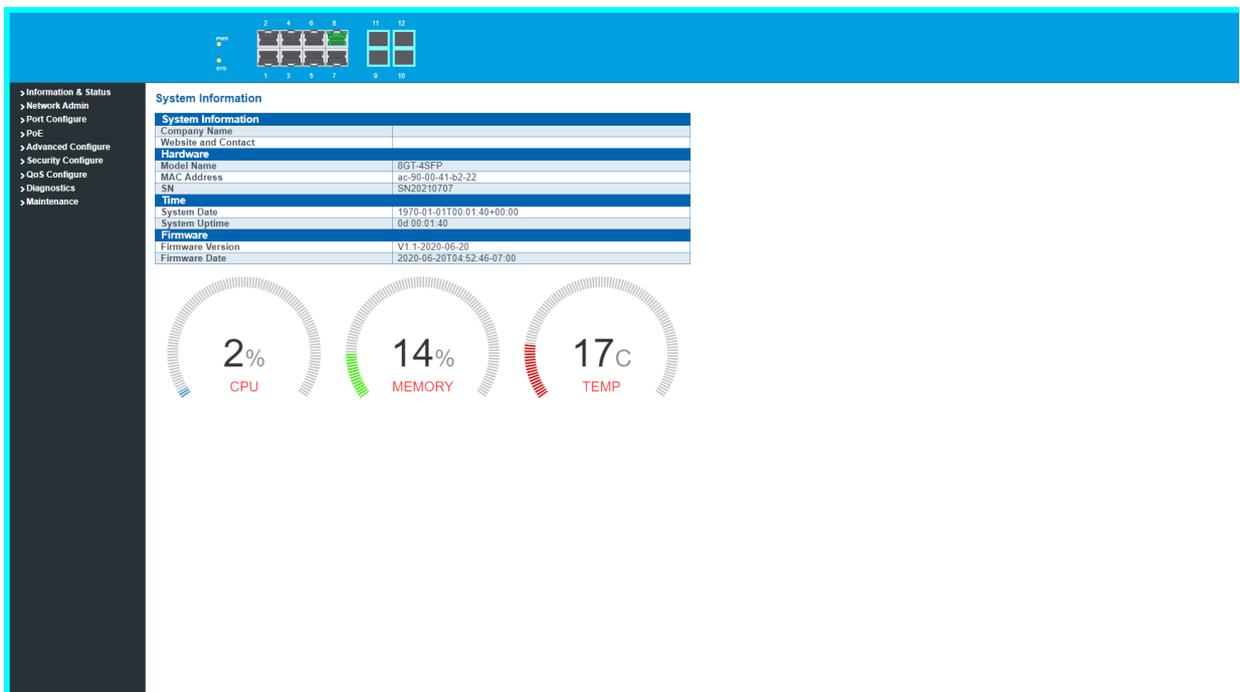

### 4.1 Login and Start

Open the browser, input the switch default address.

Press Enter, the user login page will show in front of you as follows.

Items	Default value
Switch default address	192.168.1.200
Subnet mask	255.255.255.0
Administrator's account	admin
Administrator's password	admin

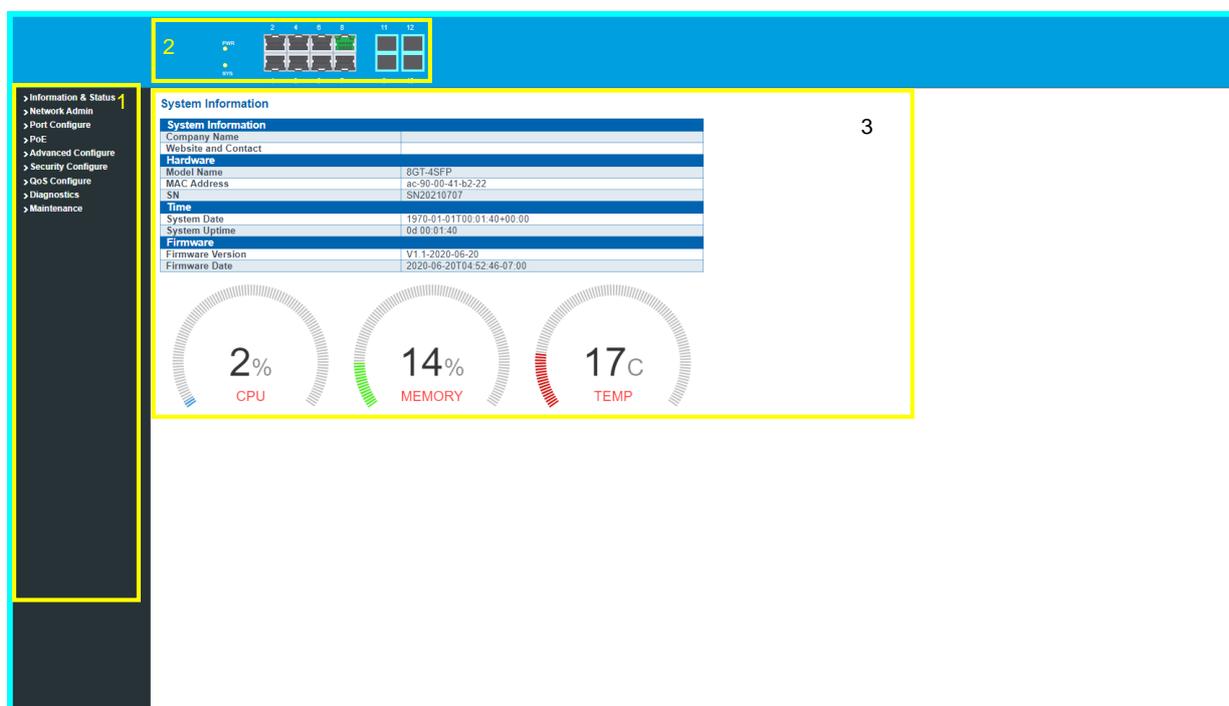

Input Administrator's account and password, press Enter, and click <Login in>, the Web system page will be shown as below:

## 4.2 Web System User Interface

### Interface Layout

The layout and style of the Web system client GUI are described as follows.

Items	Descriptions
1	Navigation tree
2	Switch ports and indicators diagram <ul style="list-style-type: none"> <li>Ports notes: <ul style="list-style-type: none"> <li><span style="display:inline-block; width:10px; height:10px; background-color:yellow;"></span> : 100Mbps linked.</li> <li><span style="display:inline-block; width:10px; height:10px; background-color:limegreen;"></span> : 1000Mbps linked.</li> <li><span style="display:inline-block; width:10px; height:10px; background-color:black;"></span> : No link.</li> </ul> </li> <li>Indicators notes: <ul style="list-style-type: none"> <li><span style="display:inline-block; width:10px; height:10px; border-radius:50%; background-color:limegreen;"></span> : The indicator is on.</li> <li><span style="display:inline-block; width:10px; height:10px; border-radius:50%; background-color:black;"></span> : The indicator is off.</li> </ul> </li> </ul>
3	Configuration area

### 4.3 Saving Configuration

After performing configuration, users need to save the configuration data. If you do not save the configuration data, the configuration that you made will be lost after reboot.

To save configurations, please click the <Save> button at the bottom of the page to save the configuration data to memory.

### 4.4 Viewing Configuration

Finished configuration, click <Refresh> button on the page, users can view the saved configuration.

### 4.5 Logging-out Web System

To protect security of user accounts and switches, please log out of the Web system immediately after finishing the configurations. Users can log out of the Web system by clicking  on the top right corner of the page to close the browser.

## 5 Information & Status

Users can check switch information and working status, including:

- System information
- IP status
- System log
- Detail system log
- MAC table
- VLANs
- Ports
- LACP
- Thermal protection
- Green Ethernet
- PoE status
- LLDP
- Loop protection
- Spanning tree
- IGMP snooping
- DHCP
- Security
- QoS

### 5.1 Traffic Statistics

Users can view traffic statistics on interfaces and update the statistics.

Port No	Sent Frame Statistics				Received Frame Statistics			
	Unicast	Multicast	Broadcast	Error	Unicast	Multicast	Broadcast	Error
1	0	0	0	0	0	0	0	0
2	0	0	0	0	0	0	0	0
3	0	0	0	0	0	0	0	0
4	0	0	0	0	0	0	0	0
5	0	0	0	0	0	0	0	0
6	0	0	0	0	0	0	0	0
7	0	0	0	0	0	0	0	0
8	0	0	0	0	0	0	0	0

#### [Procedure](#)

Click <Refresh> button to reload the page.

### 5.2 MAC Address Table

Users can view the MAC table of the interfaces.

MAC Address Table					
Sort Type		Automatic	Refresh		
No	MAC Address	VLAN ID	Port	Address Type	
1	00:08:82:C4:C3:22	1	11	dynamic	
2	50:46:5D:A9:2D:29	1	11	dynamic	
3	18:31:BF:0B:C4:12	1	11	dynamic	
4	98:45:62:1A:F7:11	1	11	dynamic	
5	50:46:5D:A9:2D:32	1	11	dynamic	
6	00:22:A2:00:03:01	1	11	dynamic	
7	54:AB:3A:2F:09:6E	1	11	dynamic	
8	98:45:62:1A:F7:1F	1	11	dynamic	
9	88:D7:F6:E0:A2:DB	1	11	dynamic	
10	40:8D:5C:3F:4D:BA	1	11	dynamic	
11	8C:89:A5:FD:DF:30	1	11	dynamic	
12	FC:AA:14:8C:F9:BA	1	11	dynamic	
13	00:00:00:00:04:29	1	11	dynamic	
14	00:22:A2:00:0E:01	1	11	dynamic	
15	00:E0:66:70:B7:0B	1	11	dynamic	
16	00:08:82:C0:07:A7	1	11	dynamic	

## Procedure

- 1) Click the drop down list to select the sort type, including
  - Automatic
  - By MAC Address
  - By VLAN
  - By port
- 2) Click <Refresh> button to reload the page.

## 6 Network Management

### 6.1 IP Configuration

Note:

IP address of switch is 192.168.1.200 by default, and the default subnet mask is 255.255.255.0(24)

Click "Network Admin"> "IP ", screen will shows as:

Following is description detail about IP configuration:

Name	Description
Port Name	Display system's port name
VLAN	VLAN for for access and management of switch
IPv4 DHCP	If enable, it means that VLAN port start IPv4 DHCP client, to dynamically get IPv4 addresses of the switch. Otherwise, it will use switch's static IP configuration. Fallback(Seconds), means the waiting time for switch to get dynamic IP address via DHCP. The value of "0" here means never over the time. Current Lease, means the IP address get from DHCP
IPv4	Address: static IPv4 address entered by user. Mask Length: static IPv4subnetmask entered by user.
IPv6	IP Address, Users can input the static IPv6 address IP Mask, Users can input the static IPv6 subnet mask
IP Routes	Destination, Users can input t he IPv4 address of destination IP Mask, Users can static IPv4 subnet mask Next address, Users can input next IPv4 address

Click "Add Interface "to create a new management for VLAN and IP address. Click "Save' 'to save settings.

Note:

The switchonly created VLAN1 by default. If user needs to use other VLAN for switch management, please first add VLAN in the VLAN module, and add the relevant port to the VLAN.

### 6.2 NTP Configuration

NTP is an acronym for Simple Network Time Protocol, a network protocol for synchronizing the clocks of computer systems. You can specify NTP Servers and set GMT Time zone. The NTP Configuration screens will appear after you click "Network Admin">"NTP".

### SNTP Configuration

Mode

Server Address

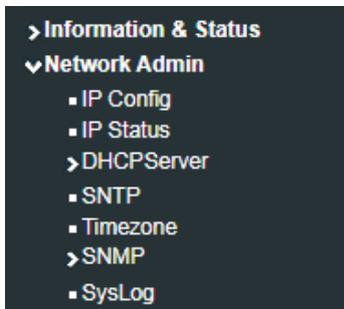

Configuration object and description is:

Object	Description
Mode	Click drop-down menu to select "Enabled" or "Disabled" NTP. Enabled: Enable NTP mode operation. When enabling NTP mode operation, the agent forwards and transfers NTP messages between the clients and the server when they are not on the same subnet domain. Disabled: Disable NTP mode operation.
NTP Sever	After input NTP server IP address, NTP information will be get from that server.

After configuration was set, please click "Save" to save the setting.

### 6.3 Timezone

Timezone is to set the time of the switch, users can set the time according to their locations. You can get into the timezone through " Network admin " > " Timezone " as below.

### System Information Configuration

System Timezone Offset (minutes)

UTC time

Configuration instructions

Item	Instruction
Time zone setting	Input the time

Click " save " to enable your settings.

### 6.4 SNMP Configuration

Simple Network Management Protocol (SNMP) is an application layer protocol that facilitates the exchange of management information between network devices. It is part of the Transmission Control Protocol/Internet Protocol (TCP/IP) protocol suite. SNMP enables network administrators to manage network performance, find and solve network problems, and plan for network growth.

This switch support SNMPv1, v2c,v3. Different versions of SNMP provides different security level for management stations and network devices.

In SNMP's v1 and v2c, it uses the "Community String" for user authentication. That string is similar to password function. SNMP application of remote user and SNMP of the Switch must use the same community string.

SNMP packets of any unauthorized sites will be ignored (discarded).

"Community String" by default for switch's SNMPv1 and v2c access management is:

- Public: allow authentication management station to read MIB objects.
- Private: allow authentication management station to read, write and edit MIB objects.

## Trap

Used by the agent to asynchronously inform the NMS of some event. These events may be very serious, such as reboot (someone accidentally turned off switch), or just general information, such as port status change. In these cases, switch create trap information and send then to receiver or network admin. Typical trap includes authentication failure, networking changes and cold/hot start trap.

## MIB

A MIB is a collection of managed objects residing in a virtual information store. Collections of related managed objects are defined in specific MIB modules. Switch uses standard MIB-II information management module. So, MIB object value can be read by any SNMP web-managed software.

### 6.4.1 SNMP System Configuration

You can enable or disable the SNMP System Configuration. Its screen will appear after you click "Network Admin">"SNMP">"System".

SNMP System Configuration	
Mode	Enabled
Version	SNMP v2c
Read Community	public
Write Community	private
Engine ID	800007e5017f000001

Save Reset

Configuration object and description is:

Object	Description
Mode	Enabled or Disable SNMP function
Version	Click drop-down menu to select SNMP v2c or SNMP v1 version
Read Community	Public: allow authentication management station to read MIB objects
Write Community	Private: allow authentication management station to read and write MIB objects.

### 6.4.2 SNMP Trap Configuration

User can enable or disable SNMP Trap function and set configuration. Click "Network Admin">"SNMP">"Trap", then this screen will show as:

- > Information & Status
- ▼ Network Admin
  - IP Config
  - IP Status
  - > DHCP Server
  - SNMP
  - Timezone
  - ▼ SNMP
    - System
    - Trap
    - Communities
    - Users
    - Groups
    - Views
    - Access
  - SysLog
- > Port Configure
- > PoE
- > Advanced Configure
- > Security Configure
- > QoS Configure
- > Diagnostics
- > Maintenance

### SNMP Trap Configuration

Trap Config Name	<input type="text"/>
Trap Mode	Enabled ▼
Trap Version	SNMP v2c ▼
Trap Community	Public
Trap Destination Address	<input type="text"/>
Trap Destination Port	162
Trap Inform Mode	Disabled ▼
Trap Inform Timeout (seconds)	3
Trap Inform Retry Times	5
Trap Probe Security Engine ID	Enabled ▼
Trap Security Engine ID	<input type="text"/>
Trap Security Name	None ▼

### SNMP Trap Event

System	<input type="checkbox"/> * <input type="checkbox"/> Warm Start	<input type="checkbox"/> Cold Start
Interface	<input type="checkbox"/> * Link up <input checked="" type="radio"/> none <input type="radio"/> specific <input type="radio"/> all switches <input type="checkbox"/> * Link down <input checked="" type="radio"/> none <input type="radio"/> specific <input type="radio"/> all switches LLDP <input checked="" type="radio"/> none <input type="radio"/> specific <input type="radio"/> all switches	
Authentication	<input type="checkbox"/> * <input type="checkbox"/> SNMP Authentication Fail	
Switch	<input type="checkbox"/> * <input type="checkbox"/> STP	<input type="checkbox"/> RMON

### 6.4.3 Communities

Users can set the new community name through “ Network admin ” > “ SNMP ” > “ Communities ” as below figure.

- > Information & Status
- ▼ Network Admin
  - IP Config
  - IP Status
  - > DHCP Server
  - SNMP
  - Timezone
  - ▼ SNMP
    - System
    - Trap
    - Communities
    - Users
    - Groups
    - Views
    - Access
  - SysLog

### SNMPv3 Community Configuration

Delete	Community	Source IP	Source Mask
<input type="checkbox"/>	v3	0.0.0.0	0.0.0.0
<input type="checkbox"/>	public	0.0.0.0	0.0.0.0
<input type="checkbox"/>	private	0.0.0.0	0.0.0.0

Configuration Instruction:

Item	Instruction
Community	Input the name of the new community
Source IP	Input IPv4 source address
Source Mask	Input IPv4 subnet mask

Click “ Save ” to enable your settings.

## 6.4.4 Users

SNMP v3 is using USM (User-Based Security Model) authentication mechanism. The administrator can set authentication and Encryption function. The authentication is verify the validity of a message sender and to avoid illegal user access. Encryption is for encrypting the communication between NMS and Agents to be bugged. Adopting above two functions, it provides greater security for communication between NMS and Agent.

Users can set a SNMP v3 account and EncryMode. Click “ Network Admin ” > “ SNMP ” > “ Users ”, as below :

Configuration Instruction:

Object	Instruction
Engine ID	Default Value 800007e5017f000001. The switch default value is recommended
User Name	Input the new account name of SNMPv3
Security Level	Three EncryModes, NoAuth, NoPriv , Auth, NoPriv , Auth,Priv, choosing by dropping down the menu
Authentication Protocol	Choose for MD5 and SHA
Authentication Password	Input the encrypted password
Privacy Protocol	Choose for DES and AES
Privacy Password	Input the encrypted password

Click “ Save ” to enable your settings.

## 6.4.5 Views

Users can set the visit view of SNMPv3. Click “ Network Admin ” > “ SNMP ” > “ View ”. As below:

Configuration Instruction:

Object	Instruction
Views Name	Input the name of Views
Views Type	Choose for included and excluded
OID Subtree	Input OID subtree, such as 1.2

Click “ Saving ” to enable your settings.

### 6.4.6 Access

Users can set an Access to load a built Views. Click “ Network Admin ” > “ SNMP ” > “ Access ”, as below:

Delete	Group Name	Security Model	Security Level	Read View Name	Write View Name
<input type="checkbox"/>	default_ro_group	any	NoAuth, NoPriv	default_view	None
<input type="checkbox"/>	default_rw_group	any	NoAuth, NoPriv	default_view	default_view

Buttons: Add New Entry, Save, Reset

Configuration Instruction

Object	Instruction
Group Name	Input the name of group
Security Model	Choose for any v1 v2c usm
Security Level	Three EncryModes, NoAuth, NoPriv , Auth, NoPriv , Auth,Priv, choosing by dropping down the menu
Read View Name	Chose the built views
Write View Name	Chose the built views

Click “ Save ” to enable your settings.

### 6.4.7 Groups

Users can set Groups to load built Users and Access. Click “ Network Admin ” > “ SNMP ” > “ Groups ”, as below.

Delete	Security Model	Security Name	Group Name
<input type="checkbox"/>	v1	public	default_ro_group
<input type="checkbox"/>	v1	private	default_rw_group
<input type="checkbox"/>	v2c	public	default_ro_group
<input type="checkbox"/>	v2c	private	default_rw_group
<input type="checkbox"/>	usm	default_user	default_rw_group

Buttons: Add New Entry, Save, Reset

Configuration Instruction

Object	Instruction
Security Model	Choose for v1 v2c usm
Security Name	Choose the built account name. For built team name under v1 v2c, built account name under usm
Group Name	Input built group name

Click “ Save ” to enable settings.

## 6.5 System Log Configuration

User can configure switch’s system log, via following screen after click "Network Admin">"Syslog".

Configuration Screen Configuration object and description is:

Object	Description
Server Mode	Enabled or Disable SNMP System Log function. If "Enable" is selected, switch will send System Log to defined server.
Server Address	Defined server IP address
Syslog Level	To define level of System Log, including: Info: Information, warnings and errors. Warning: warnings and errors. Error: errors.

## 7 Port Configure

### 7.1 Port Configuration

This page is for configuring port specifications of switch. After click "Port Configure">"Ports", this screen will appear as:

Port	Description	Link	Current	Speed Configured	Adv Duplex			Adv speed			Flow Control		Maximum Frame Size	Excessive Collision Mode	Frame Length Check	
					Fdx	Hdx	10M	100M	1G	Enable	Curr Rx	Curr Tx				
*				<>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	9600	<>	<input type="checkbox"/>					
1		Down	Down	Auto	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	9600	Discard	<input type="checkbox"/>					
2		Down	Down	Auto	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	9600	Discard	<input type="checkbox"/>					
3		Down	Down	Auto	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	9600	Discard	<input type="checkbox"/>				
4		1Gfdx	Down	Auto	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	9600	Discard	<input type="checkbox"/>				
5		Down	Down	Auto	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	9600	Discard	<input type="checkbox"/>				
6		Down	Down	Auto	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	9600	Discard	<input type="checkbox"/>

10		1Gfdx Fiber	Down	Auto	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	9600		<input type="checkbox"/>					

Configuration object and description is:

Object	Description
Link	Red color means Link Down, green color means Link Up
Speed	Select the port speed and full / half duplex mode. "Disabled" means that port is disabled. "Auto" meaning in full-duplex (FDX) or half-duplex mode (HDX) (1000mbps always in full-duplex mode) auto negotiate among 10,100,1000Mbps devices. "Auto" setting allows the port to automatically determine the fastest settings for the device connected, and to apply these settings. "1000-X_AMS" means that port is Ethernet/Optical combo port, and optical port is prioritized. Other options are 10M HDX, 10M FDX, 100M HDX, 100M FDX, 1000M FDX, 1000-X.
Flow Control	It is a flow control mechanism for a variety of port configurations. Full-duplex ports use 802.3x flow control, half-duplex ports use backpressure flow control. It is disabled by default. Check to enable flow control.
Maximum Frame Size	It is used to set the maximum frame size for Ethernet. The default setting is 9600, which is to support Jumbo frames.

Click "Save" to store and active settings.

### 7.2 Link Aggregation

Users can set up multiple links among multiple switches. Link Aggregation, is a method that tie some physical ports together as one logic port, to enlarge bandwidth. This switch supports up to 13 groups Link Aggregation, 2 to 8 port as one group.

Note: If any port in the link aggregation group is disconnected, data packet that sent to disconnected port will share load with other connected port in this aggregation group.

#### 7.2.1 Static Aggregation

In this page, user can configure static aggregation of switch's ports. After click the menu "Port Configure">"Aggregation">"Static", followed window will appear for making static aggregation settings.

- > Information & Status
- > Network Admin
- ▼ Port Configure
  - Ports
  - ▼ Aggregation
    - Static
    - LACP
  - Mirroring
  - Thermal Protection
  - Green Ethernet

5	<input type="radio"/>									

Configuration Screen Configuration object and description is:

Object	Description
Aggregation Mode Configuration	This parameter is flow hash algorithm among LAG(Link Aggregated Group) ports.
Group ID	Static aggregation group ID
Port Members	This switch supports up to 13 groups Link Aggregation, 2 to 8 port as one group.

Click "Save" to store and active settings.

Note: It allows a maximum of 8 ports to be aggregated as 1 static trunk group at the same time.

### 7.2.2 LACP Aggregation

Link Aggregation Control Protocol (LACP) provides a standardized means for exchanging information between Partner Systems that require high-speed redundant links. Link aggregation lets you group up to eight consecutive ports into a single dedicated connection. This feature can expand bandwidth to a device on the network. LACP operation requires full-duplex mode. For more detailed information, refer to the IEEE 802.3ad standard.

Users can create dynamic aggregation group for switches. After click "Port Configure">"Aggregation">"LACP", users can set LACP configuration in followed screen.

- > Information & Status
- > Network Admin
- > Port Configure
  - Ports
  - Aggregation
    - Static
    - LACP
    - Mirroring
    - Thermal Protection
    - Green Ethernet
  - DDM
- PoE
- Advanced Configure
- Security Configure
- QoS Configure
- Diagnostics
- Maintenance

### LACP Port Configuration

Port	LACP Enabled	Key	Role	Timeout	Prio
*	<input type="checkbox"/>	<>	<>	<>	32768
1	<input type="checkbox"/>	Auto	Active	Fast	32768
2	<input type="checkbox"/>	Auto	Active	Fast	32768
3	<input type="checkbox"/>	Auto	Active	Fast	32768
4	<input type="checkbox"/>	Auto	Active	Fast	32768
5	<input type="checkbox"/>	Auto	Active	Fast	32768
6	<input type="checkbox"/>	Auto	Active	Fast	32768
7	<input type="checkbox"/>	Auto	Active	Fast	32768
8	<input type="checkbox"/>	Auto	Active	Fast	32768
9	<input type="checkbox"/>	Auto	Active	Fast	32768
10	<input type="checkbox"/>	Auto	Active	Fast	32768

Configuration Screen Configuration object and description is:

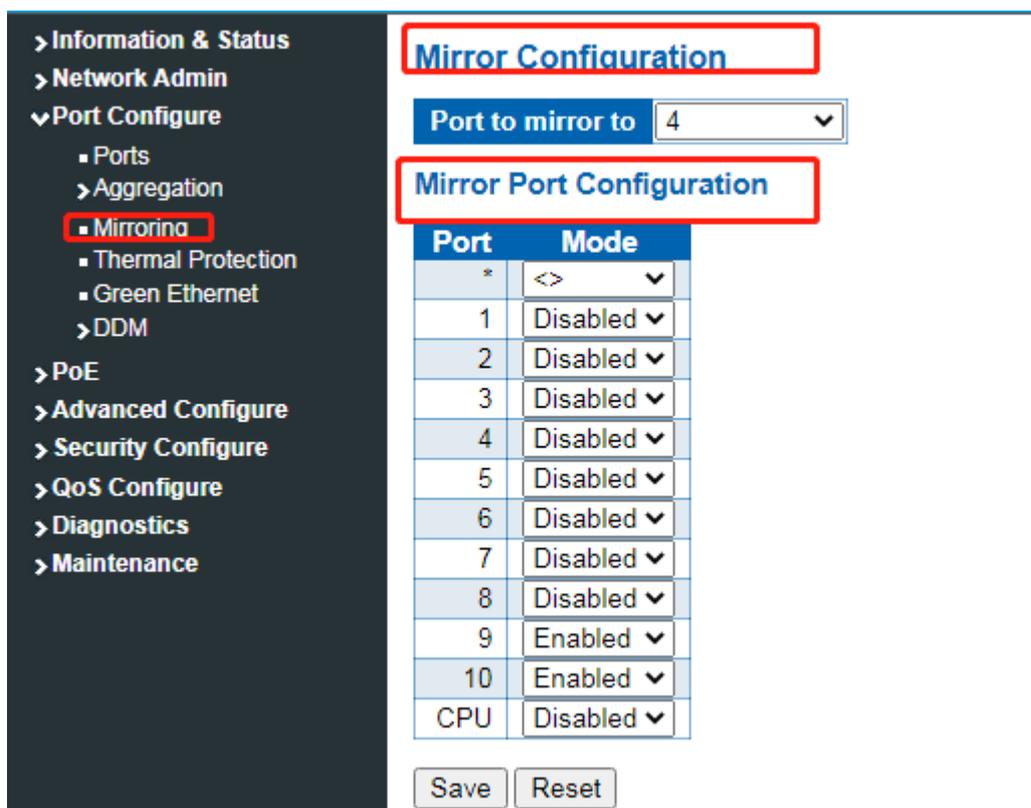

Object	Description
LACP	Enable or disable LACP function of that port.
Key	The Key value incurred by the port, range 1-65535. The Auto setting will set the key as appropriate by the physical link speed, 10Mb = 1, 100Mb = 2, 1Gb = 3. Using the Specific setting, a user-defined value can be entered. Ports with the same Key value can participate in the same aggregation group, while ports with different keys cannot.
Role	The Role shows the LACP activity status. The Active will transmit LACP packets each second, while Passive will wait for a LACP packet from a partner (speak if spoken to).
Timeout	The Timeout controls the period between BPDU transmissions. Fast will transmit LACP packets each second, while Slow will wait for 30 seconds before sending a LACP packet.
Prio	The Prio controls the priority of the port. If the LACP partner wants to form a larger group than is supported by this device then this parameter will control which ports will be active and which ports will be in a backup role. Lower number means greater priority.

Click "Save" to store and active settings.

### 7.3 Port Mirroring

Configure port Mirroring on this page. This function provides monitoring of network traffic that forwards a copy of each incoming or outgoing packet from one port of a network switch to another port where the packet can be studied. It enables the manager to keep close track of switch performance and alter it if necessary.

To configure Mirror settings, please click "Port Configure">"Mirroring". Then followed screen will appear as:

Configuration Screen Configuration object and description is:

Object	Description
Port mirror to	Frames from ports that have either source (rx) or destination (tx) mirroring enabled are mirrored on this port. Disabled disables mirroring.
Mode	Select source port mirror mode. Rx only Frames received on this port are mirrored on the mirror port. Frames transmitted are not mirrored. Tx only Frames transmitted on this port are mirrored on the mirror port. Frames received are not mirrored. Disabled Neither frames transmitted nor frames received are mirrored. Enabled Frames received and frames transmitted are mirrored on the mirror port. Note: For a given port, a frame is only transmitted once. It is therefore not possible to mirror mirror port Tx frames. Because of this, mode for the selected mirror port is limited to Disabled or Rx only.

Click "Save" to store and active settings.

Note: You can't set fast speed port(s) mirror to a low speed port. For example, there is problem if you try to mirror 100Mbps port(s) to a 10 Mbps port. So destination port should has equal or higher speed comparing to source port. Besides, source port and destination port should not be same one.

## 7.4 Thermal Protection Configuration

Thermal protection is for detecting and protecting working switch. When switch detected port temperature is higher that defined temperature, system will disable the port, to protect switch itself.

After click "Port Configure">"Thermal Protection", followed screen will appear as:

- > Information & Status
- > Network Admin
- ▼ Port Configure
  - Ports
  - > Aggregation
  - Mirroring
  - Thermal Protection
  - Green Ethernet
  - > DDM
- > PoE
- > Advanced Configure
- > Security Configure
- > QoS Configure
- > Diagnostics
- > Maintenance

## Thermal Protection Configuration

### Temperature settings for groups

Group	Temperature	
0	<input style="width: 50px;" type="text" value="255"/>	°C
1	<input style="width: 50px;" type="text" value="255"/>	°C
2	<input style="width: 50px;" type="text" value="255"/>	°C
3	<input style="width: 50px;" type="text" value="255"/>	°C

5	Disabled ▼
6	Disabled ▼
7	Disabled ▼
8	Disabled ▼
9	Disabled ▼
10	Disabled ▼

Configuration object and description is:

Object	Description
Temperature settings for priority groups	This switch supports 4 Thermal Protection priority groups, and each of them can have a defined temperature for protection.
Port priorities	Define which priority group that port belong to.

Note:

By default, all ports of switch are belong to Priority Group 0, with protected temperature 225 °C.

## 8 PoE Configuration

Power-over-Ethernet (PoE), means Ethernet network power supply via 100BASE-TX, 1000BASE-T. Its maximum power distance is 100 meters. By PoE power system, based on Ethernet wiring network of UTP Cat5 or higher Cable, it can give power to IP camera, VoIP phone, wireless AP, as well as transmit data. So there is no need to concern about the power wire building, reducing the cost of networking building.

PoE power supply system has unified standard, IEEE 802.3af and 802.3at. So devices from different manufacturers have no problem in general usage, as long as they are complied with these standards.

PD, it is defined as powered device in the PoE Power Supply System , primarily including IP camera, wireless AP, network VoIP phone, and other IP-based terminal equipment.

The whole process of PoE:

- Detection: At beginning, PSE device output a very small voltage, to detect and judge if its linked PD is IEEE802.3af / IEEE802.3at compliant device. Only if detected that PD is a standard compliant device, then it will go to next step.
- PD Classification: After detected PDs, PSE will classify them and recognize what is the power that PD required.
- Power up: When above 2 steps finished, PSE start feeding required power for PD, with 44~57VDC output voltage.
- Power supply: PSE provides stable 44~57V DC to PDs, and auto feeding power as requirement of PDs. Maximum power of single PoE port for IEEE 802.3af devices: 15.4W; Maximum power of single PoE port for IEEE 802.3at devices: 25.5W.
- Disconnection: If PD is disconnected or user disable PoE from management software, PSE will quickly (300- 400ms) stop powering PD.

In any moment of PSE powering PD process, PSE will stop working and then restart from step1 if abnormal situation happens, such as PD Short circuit, power consumption is higher than feeding power, and so on.

### 8.1 PoE Setting

After click "PoE">"PoE Setting", user can make PoE settings in followed screen:

**Power Over Ethernet Configuration**

Reserved Power determined by  Auto  Manual

Power Management Mode  Actual Consumption  Reserved Power

**PoE Power Supply Configuration**

Primary Power Supply [W]

**PoE Port Configuration**

Port	PoE Mode	Priority	PD Alive Check	Maximum Power [W]	Description
*	<>	<>	<>	30	
1	PoE+	Low	OFF	30	
2	PoE+	Low	OFF	30	
3	PoE+	Low	OFF	30	
4	PoE+	Low	OFF	30	
5	PoE+	Low	OFF	30	
6	PoE+	Low	OFF	30	
7	PoE+	Low	OFF	30	
8	PoE+	Low	OFF	30	

Save Reset

Configuration object and description is:

Object	Description
Reserved Power determined by	This switch supports 2 modes for reserved power determination. Auto: Switch automatically assigned maximum power of switch port

	<p>according to detected PD class. About PD Class, please refer to the 802.3af / 802.3at definition.</p> <p>Manual: Maximum reserved power of the port is customize by the user.</p>
Power Management Mode	<p>This switch supports 2 modes for Power Management.</p> <p>Actual Consumption: In this mode, when the actual power consumption of all the ports exceeds the switch's power budget, the lowest priority port will be shut down. If all ports have the same priority, then the maximum port number would be shut down.</p> <p>Reserved Power: In this mode, when the reserved power consumption of all the ports exceeds the switch's power budget, the port that connect to new PD will not be enabled.</p>
Primary Power Supply [W]	Users can set the maximum primary power of the whole switch. Default setting is 370W.
PoE Mode	This switch support 802.3af(PoE) and 802.3at(PoE+) mode. Default setting is 802.3at. Supports switching between 802.3af(PoE) and 802.3at(PoE+), and can be turned off.
Priority	Define the priority of the PoE port. Priority from low to high is Low, High, Critical.
Maximum Power(W)	It is for define port's maximum Power when user set Manual as reserved power determination mode.

Click "Save" to store and active settings.

## 8.2 PoE Status

In this page, user can check and look PoE status of all ports, after click "PoE">"PoE Status".

Local Port	Description	PD class	Power Requested	Power Allocated	Power Used	Current Used	Priority	PD Alive Check Count	Reset	Port Status
1		-	0 [W]	0 [W]	0 [W]	0 [mA]	Low	0		PoE not available - No PoE chip found
2		-	0 [W]	0 [W]	0 [W]	0 [mA]	Low	0		PoE not available - No PoE chip found
3		-	0 [W]	0 [W]	0 [W]	0 [mA]	Low	0		PoE not available - No PoE chip found
4		-	0 [W]	0 [W]	0 [W]	0 [mA]	Low	0		PoE not available - No PoE chip found
5		-	0 [W]	0 [W]	0 [W]	0 [mA]	Low	0		PoE not available - No PoE chip found
6		-	0 [W]	0 [W]	0 [W]	0 [mA]	Low	0		PoE not available - No PoE chip found
7		-	0 [W]	0 [W]	0 [W]	0 [mA]	Low	0		PoE not available - No PoE chip found
8		-	0 [W]	0 [W]	0 [W]	0 [mA]	Low	0		PoE not available - No PoE chip found
Total			0 [W]	0 [W]	0 [W]	0 [mA]				

## 9 Advanced Configure

### 9.1 VLAN

VLAN(Virtual Local Area Network) logically divide one LAN(Local Area Network) into a plurality of subsets, and each subset will form their own broadcast area network. In short, VLAN is a communication technology that logically divide one physical LAN into multiple broadcast area network(multiple VLAN). Hosts within a VLAN can communicate directly. But VLAN groups can't directly communicate with each other. So it will limit the broadcast packets within a VLAN. Since it can't directly access between VLAN groups, thus it improves network security.

Click "Advanced Configure">"VLANs"to see 802.1Q VLAN configuration screen as following:

**Global VLAN Configuration**

Allowed Access VLANs: 1

Ethertype for Custom S-ports: 88A8

**Port VLAN Configuration**

Port	Mode	Port VLAN	Port Type	Ingress Filtering	Ingress Acceptance	Egress Tagging	Allowed VLANs	Forbidden VLANs
*	<>	1	<>	<input checked="" type="checkbox"/>	<>	<>	1	
1	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag Port VLAN	1	
2	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag Port VLAN	1	
3	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag Port VLAN	1	
4	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag Port VLAN	1	
5	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag Port VLAN	1	
6	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag Port VLAN	1	
7	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag Port VLAN	1	
8	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag Port VLAN	1	
9	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag Port VLAN	1	
10	Access	1	C-Port	<input checked="" type="checkbox"/>	Tagged and Untagged	Untag Port VLAN	1	

Save Reset

Configuration object and description is:

Object	Description
Allowed VLANs	Here displays created VLAN ID. It is 1 by default. If you want to create new VLAN, just need to add VLAN ID here.
Ether type for Custom S-ports	This field specifies the ether type/TPID (specified in hexadecimal) used for Custom S- ports. The setting is in force for all ports whose Port Type is set to S-Custom-Port.

Mode	<p>The port mode (default is Access) determines the fundamental behavior of the port in question. A port can be in one of three modes as described below. Whenever a particular mode is selected, the remaining fields in that row will be either grayed out or made changeable depending on the mode in question. Grayed out fields show the value that the port will get when the mode is applied.</p> <p><b>Access:</b></p> <p>Access ports are normally used to connect to end stations. Access ports have the following characteristics:</p> <ul style="list-style-type: none"> <li>Member of exactly one VLAN, the Port VLAN (a.k.a. Access VLAN), which by default is 1</li> <li>Accepts untagged and C-tagged frames</li> <li>Discards all frames that are not classified to the Access VLAN</li> <li>On egress all frames classified to the Access VLAN are transmitted untagged. Other (dynamically added VLANs) are transmitted tagged</li> </ul> <p><b>Trunk:</b></p> <p>Trunk ports can carry traffic on multiple VLANs simultaneously, and are normally used to connect to other switches. Trunk ports have the following characteristics:</p> <ul style="list-style-type: none"> <li>By default, a trunk port is member of all VLANs (1-4094)</li> <li>The VLANs that a trunk port is member of may be limited by the use of <u>Allowed VLANs</u></li> <li>Frames classified to a VLAN that the port is not a member of are discarded</li> <li>By default, all frames but frames classified to the Port VLAN (a.k.a. Native VLAN) get tagged on egress. Frames classified to the Port VLAN do not get C-tagged on egress</li> <li>Egress tagging can be changed to tag all frames, in which case only tagged frames are accepted on ingress</li> </ul> <p><b>Hybrid:</b></p> <p>Hybrid ports resemble trunk ports in many ways, but adds additional port configuration features. In addition to the characteristics described for trunk ports, hybrid ports have these abilities:</p> <ul style="list-style-type: none"> <li>Can be configured to be VLAN tag unaware, C-tag aware, S-tag aware, or S-custom-tag aware</li> <li>Ingress filtering can be controlled</li> <li>Ingress acceptance of frames and configuration of egress tagging can be configured independently</li> </ul>
Port VLAN	<p>Determines the port's VLAN ID (a.k.a. PVID). Allowed VLANs are in the range 1 through 4094, default being 1.</p> <p>On ingress, frames get classified to the Port VLAN if the port is configured as VLAN unaware, the frame is untagged, or VLAN awareness is enabled on the port, but the frame is priority tagged (VLAN ID = 0).</p> <p>On egress, frames classified to the Port VLAN do not get tagged if <u>Egress Tagging</u> configuration is set to untag Port VLAN.</p> <p>The Port VLAN is called an "Access VLAN" for ports in Access mode and Native VLAN for ports in Trunk or Hybrid mode.</p>

Port Type	<p>Ports in hybrid mode allow for changing the port type, that is, whether a frame's VLAN tag is used to classify the frame on ingress to a particular VLAN, and if so, which TPID it reacts on. Likewise, on egress, the Port Type determines the TPID of the tag, if a tag is required.</p> <p>Unaware: On ingress, all frames, whether carrying a VLAN tag or not, get classified to the Port VLAN, and possible tags are not removed on egress.</p> <p>C-Port: On ingress, frames with a VLAN tag with TPID = 0x8100 get classified to the VLAN ID embedded in the tag. If a frame is untagged or priority tagged, the frame gets classified to the Port VLAN. If frames must be tagged on egress, they will be tagged with a C-tag.</p>
	<p>S-Port: On ingress, frames with a VLAN tag with TPID = 0x8100 or 0x88A8 get classified to the VLAN ID embedded in the tag. If a frame is untagged or priority tagged, the frame gets classified to the Port VLAN. If frames must be tagged on egress, they will be tagged with an S-tag.</p> <p>S-Custom-Port: On ingress, frames with a VLAN tag with a TPID = 0x8100 or equal to the <u>Ethertype configured for Custom-S ports</u> get classified to the VLAN ID embedded in the tag. If a frame is untagged or priority tagged, the frame gets classified to the Port VLAN. If frames must be tagged on egress, they will be tagged with the custom S-tag.</p>
Ingress Filter	<p>Hybrid ports allow for changing ingress filtering. Access and Trunk ports always have ingress filtering enabled.</p> <p>If ingress filtering is enabled (checkbox is checked), frames classified to a VLAN that the port is not a member of get discarded.</p> <p>If ingress filtering is disabled, frames classified to a VLAN that the port is not a member of are accepted and forwarded to the switch engine. However, the port will never transmit frames classified to VLANs that it is not a member of.</p>
Ingress Acceptance	<p>Hybrid ports allow for changing the type of frames that are accepted on ingress.</p> <p>Tagged and Untagged Both tagged and untagged frames are accepted.</p> <p>Tagged Only Only tagged frames are accepted on ingress. Untagged frames are discarded.</p> <p>Untagged Only Only untagged frames are accepted on ingress. Tagged frames are discarded.</p>

Egress Tagging	<p>Ports in Trunk and Hybrid mode may control the tagging of frames on egress.</p> <p><b>Untag Port VLAN</b> Frames classified to the Port VLAN are transmitted untagged. Other frames are transmitted with the relevant tag.</p> <p><b>Tag All</b> All frames, whether classified to the Port VLAN or not, are transmitted with a tag.</p> <p><b>Untag All</b> All frames, whether classified to the Port VLAN or not, are transmitted without a tag. This option is only available for ports in Hybrid mode.</p>
Allowed VLANs	<p>Ports in Trunk and Hybrid mode may control which VLANs they are allowed to become members of. Access ports can only be member of one VLAN, the Access VLAN.</p> <p>The field's syntax is identical to the syntax used in the <u>Enabled VLANs</u> field. By default, a Trunk or Hybrid port will become member of all VLANs, and is therefore set to <b>1-4094</b>.</p> <p>The field may be left empty, which means that the port will not become member of any VLANs.</p>
Forbidden VLANs	<p>A port may be configured to never be member of one or more VLANs. This is particularly useful when dynamic VLAN protocols like MVRP and GVRP must be prevented from dynamically adding ports to VLANs.</p> <p>The trick is to mark such VLANs as forbidden on the port in question. The syntax is identical to the syntax used in the <u>Enabled VLANs</u> field.</p> <p>By default, the field is left blank, which means that the port may become a member of all possible VLANs.</p>

Click "Save" to store and active settings.

## 9.2 Port Isolation

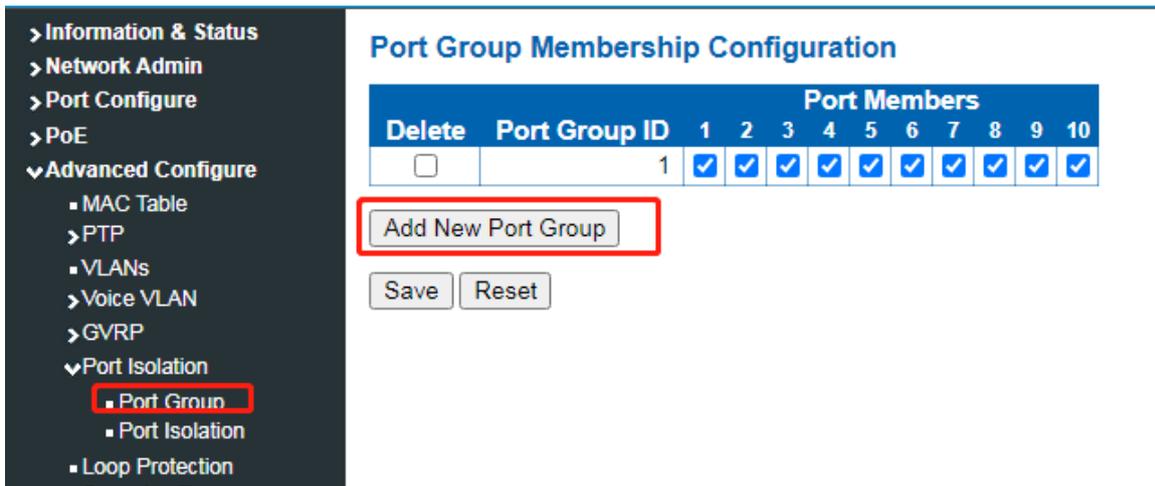

Port isolation is for limiting data between ports. It is similar to VLAN, but stricter.

### 9.2.1 Port Group

This switch support port groups. Members of port group can forward data.

Note: port can belong to multiple port groups. Data can be forwarded among any port that belong to one port group.

After Click "Advanced Configure">"Port Isolation">"Port Group", then followed screen will appear for making port group configuration.

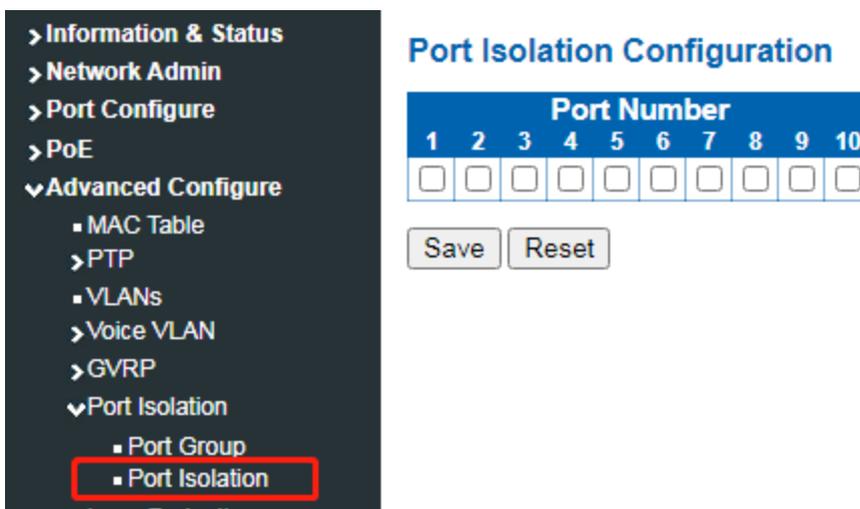

Configuration Screen Configuration object and description is:

Object	Description
Port Members	Check the corresponding box to set them as one port group.

Click "Add New Port Group" to create a new port group, "Delete" to remove corresponding port group, and "Save" to store and active settings.

### 9.2.2 Port Isolation

After Click "Advanced Configure">"Port Isolation">"Port Isolation", then followed screen will appear for making port isolation configuration.

Configuration object and description is:

Object	Description
Port Number	Check box to set corresponding port as port isolation, so that they can't forward data flow.

Click "Save" to store and active settings.

### 9.3 STP

The Spanning Tree Protocol (STP) can be used to detect and disable network loops, and to provide backup links between switches, bridges or routers. This allows the switch to interact with other bridging devices in your network to ensure that only one route exists between any two stations on the network, and provide backup links which automatically take over when a primary link goes down.

### 9.3.1 STP Bridge Settings

This page allows you to configure port STP settings. After Click "Advanced Configure">"Spanning Tree">"Bridge Settings", followed screen will appear.

Configuration object and description is:

Object	Description
Protocol Version	Click drop-down menu to select STP protocol version, including: STP - Spanning Tree Protocol (IEEE802.1D); RSTP - Rapid Spanning Tree Protocol (IEEE802.1w)
Bridge Priority	Controls the bridge priority. Lower numeric values have better priority. The bridge priority plus the MSTI instance number, concatenated with the 6-byte MAC address of the switch forms a Bridge Identifier.
Forward Delay (4-30)	Forward Delay setting range is from 4 to 30 seconds. Default value is 15 seconds.
Max Age (6-40)	The maximum age of the information transmitted by the Bridge when it is the Root Bridge. Valid values are in the range 6 to 40 seconds. Default value is 20.
Maximum Hop Count (6-40)	This defines the initial value of remaining Hops for MSTI information generated at the boundary of an MSTI region. It defines how many bridges a root bridge can distribute its BPDU information. Valid values are in the range 6 to 40 hops.
Transmit Hold Count (1-10)	The number of BPDU's a bridge port can send per second. When exceeded, transmission of the next BPDU will be delayed. Valid values are in the range 1 to 10 BPDU's per second. Default value is 6.

Click "Save" to store and active settings.

### 9.3.2 MSTI Mapping

Users can set the mapping, Click "Advanced Configure" > "Spanning Tree" > "MSTI Mapping".

- > Information & Status
- > Network Admin
- > Port Configure
- > PoE
- ▼ Advanced Configure
  - MAC Table
  - > PTP
  - VLANs
  - > Voice VLAN
  - > GVRP
  - > Port Isolation
  - Loop Protection
  - ▼ Spanning Tree

  - > IGMP Snooping
  - > IPv6 MLD Snooping
    - LLDP
  - > Security Configure
  - > QoS Configure
  - > Diagnostics
  - Maintenance

### MSTI Configuration

Add VLANs separated by spaces or comma.

**Unmapped VLANs are mapped to the CIST. (The default bridge instance).**

Configuration Identification

Configuration Name	ac-90-18-10-00-30
Configuration Revision	0

MSTI Mapping

MSTI	VLANs Mapped
MSTI1	
MSTI2	
MSTI3	
MSTI4	
MSTI5	
MSTI6	
MSTI7	

Configuration Instruction:

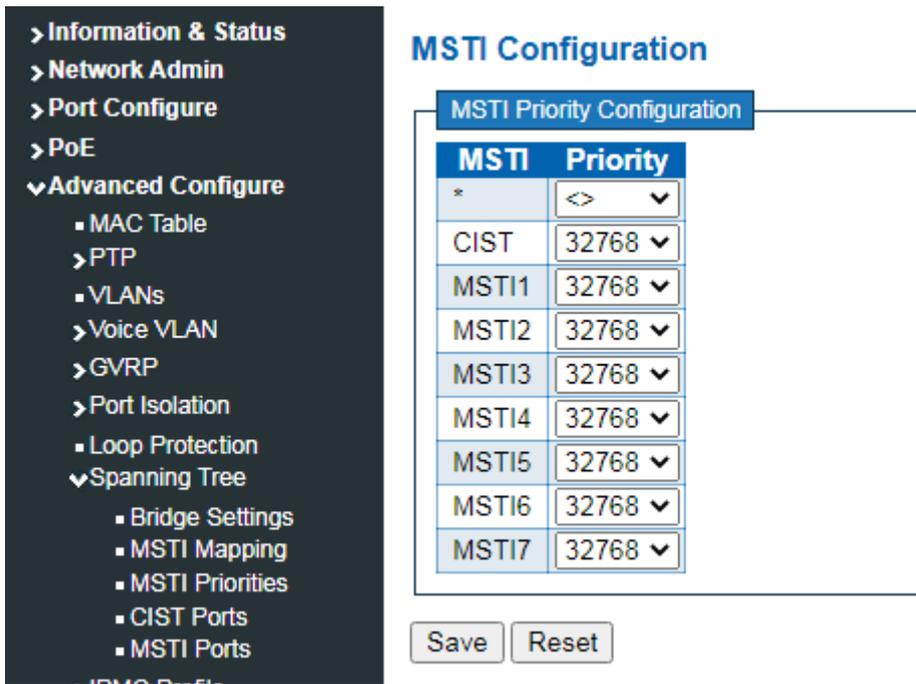

Object	Instruction
Configuration Name	Set domain name of MSTP
Configuration Revision	Set Configuration Revision
MSTI Mapping	Input the VLAN that need mapping

Click “ Save ” to enable your settings.

Note: Please set the same value for configuration name and configuration revision of all switches in the looped network when set MSTP.

### 9.3.3 MSTI Priorities

Users can set MSTI priorities, click “ advanced configure ”>“ Spanning Tree ”>“ MSTI Priorities ”

Configuration Instruction

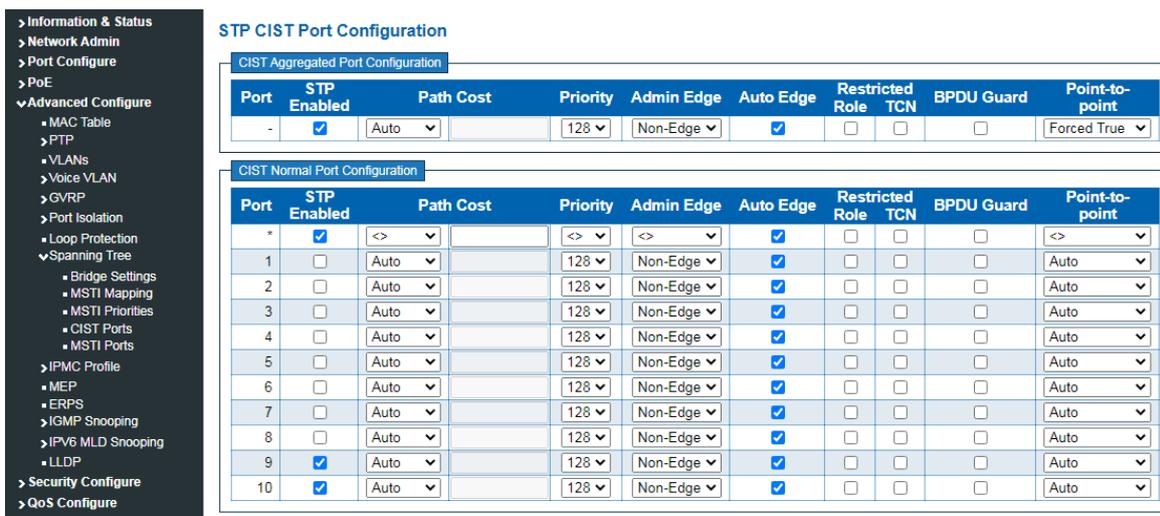

Object	Instruction
MSTI Priorities	Set the priority, value ranges : 0-61440

Click “ Save ” to enable your settings.

Note: The priority value must be in multiples of 4094, at the range of 0-61440

### 9.3.4 STP Bridge Port

After Click "Advanced Configure">"Spanning Tree">"Bridge Ports", followed screen will appear.

Configuration object and description is:

Object	Description
STP Enabled	Check to enable STP function.

Path Cost(0=Auto)	Controls the path cost incurred by the port. The Auto setting will set the path cost as appropriate by the physical link speed, using the 802.1D recommended values. Using the Specific setting, a user-defined value can be entered. The path cost is used when establishing the active topology of the network. Lower path cost ports are chosen as forwarding ports in favor of higher path cost ports. Valid values are in the range 1 to 200000000.
Priority	Controls the port priority. This can be used to control priority of ports having identical port cost. (See above).
Auto Edge	Check box to set corresponding port as Auto Edge.
Restricted Role	Check box to set corresponding port as Restricted Role
Restricted TCN	Check box to set corresponding port as Restricted TCN
BPDU Guide	Check box to enable BPDU Guide. So when port receives BPDU reception, it will turn to Disable(Shut Down) status.
Point-to-point	Controls whether the port connects to a point-to-point LAN rather than a shared medium. This can be automatically determined, or forced either true or false. Transition to the forwarding state is faster for point-to-point LANs than for shared media.(This applies to physical ports only. Aggregations are always forced Point2Point.

Click "Save" to store and active settings.

### 9.3.5 MSTI Ports

Users can set MSTI ports, click "Advanced Configure ">" Spanning Tree ">" MSTI Ports ".

- > Information & Status
- > Network Admin
- > Port Configure
- > PoE
- ▼ Advanced Configure
  - MAC Table
  - > PTP
  - VLANs
  - > Voice VLAN
  - > GVRP
  - > Port Isolation
  - Loop Protection
  - ▼ Spanning Tree
    - Bridge Settings
    - MSTI Mapping
    - MSTI Priorities
    - CIST Ports
    - MSTI Ports
  - > IPMC Profile
  - MEP
  - ERPS
  - > IGMP Snooping
  - > IPV6 MLD Snooping
  - LLDP
- > Security Configure
- > QoS Configure

#### MST1 MSTI Port Configuration

MSTI Aggregated Ports Configuration

Port	Path Cost	Priority
-	Auto ▼	128 ▼

MSTI Normal Ports Configuration

Port	Path Cost	Priority
*	<> ▼	<> ▼
1	Auto ▼	128 ▼
2	Auto ▼	128 ▼
3	Auto ▼	128 ▼
4	Auto ▼	128 ▼
5	Auto ▼	128 ▼
6	Auto ▼	128 ▼
7	Auto ▼	128 ▼
8	Auto ▼	128 ▼
9	Auto ▼	128 ▼
10	Auto ▼	128 ▼

Configuration Instruction

Object	Instruction
Path Cost	Used to define a metric, representing the associated overhead of forwarding packets to a specified port list. The port overhead can be automatically set or set to a metric value. The default value is 0 (automatic). The lower the number, the more likely it is to select the port to forward the packet.  Controls the path cost incurred by the port. The Auto setting will set the path cost as appropriate by the physical link speed, using the 802.1D recommended values. Using the Specific setting, a user-defined value can be entered. The path cost is used when establishing the active topology of the network. Lower path cost ports are chosen as forwarding ports in favour of higher path cost ports. Valid values are in the range 1 to 200000000.
Priority	When the port's path overhead is the same, the priority is used to decide the forwarding state of the port.

Click "Save" to store and active settings.

### 9.4 MAC Address Table

This page allows you to configure Mac address table settings. After Click "Advanced Configure">"Mac Table" ,followed screen will appear.

Configuration Screen Configuration object and description is:

Object	Description
Disable Automatic Aging	If the box is checked, then the automatic aging function is disabled.

Aging Time	The time after which a learned entry is discarded. Range: 10-1000000 seconds; Default: 300 seconds.
MAC Table Learning	This switch supports 3 types for MAC Table Learning Auto: port will auto learn Mac address. Disable: port will NOT learn MAC address. Secure: port only forward data of configured static MAC address.
Static MAC Table Configuration	The static entries in the MAC table are shown in this table. Click "Add New Static Entry" to create a new record.

Click "Save" to store and active settings.

## 9.5 IGMP Snooping

Internet Group Management Protocol (IGMP) lets host and routers share information about multicast groups memberships. IGMP snooping is a switch feature that monitors the exchange of IGMP messages and copies them to the CPU for feature processing. The overall purpose of IGMP Snooping is to limit the forwarding of multicast frames to only ports that are a member of the multicast group.

### 9.5.1 Basic Configuration

After Click "Advanced Configure">"IGMP Snooping">"Basic Configuration", followed screen will appear.

- > Information & Status
- > Network Admin
- > Port Configure
- > PoE
- ▼ Advanced Configure
  - MAC Table
  - > PTP

Configuration object and description is:

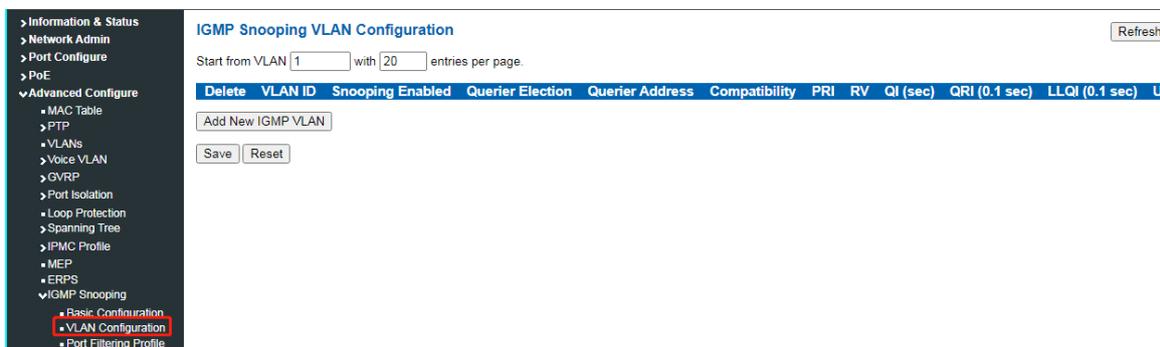

Object	Description
Snooping Enabled	Enable or disable the IGMP snooping. The default value is "Disabled". Enable: check the box; Disable: do not check the box.

Unregistered IPMCv4 Flooding Enabled	Check the box to enable unregistered IPMCv4 Flooding
Router Port	Specify which ports act as router ports. A router port is a port on the Ethernet switch that leads towards the Layer 3 multicast device or IGMP querier. If an aggregation member port is selected as a router port, the whole aggregation will act as a router port.
Fast Leave	Fast leave performs deleting MAC forward entry immediately upon receiving message for group de-registration

Click "Save" to store and active settings.

### 9.5.2 IGMP Snooping VLAN Configuration

After Click "Advanced Configure">"IGMP Snooping">"VLAN Configuration", followed screen will appear.

VLAN Configuration object and description is:

Object	Description
Snooping Enabled	Enable the per-VLAN IGMP Snooping. Up to 32 VLANs can be selected for IGMP Snooping.
Querier Election	Enable to join IGMP Querier election in the VLAN. Disable to act as an IGMP Non-Querier.
Querier Address	Define the IPv4 address as source address used in IP header for IGMP Querier election. When the Querier address is not set, system uses IPv4 management address of the IP interface associated with this VLAN. When the IPv4 management address is not set, system uses the first available IPv4 management address. Otherwise, system uses a pre-defined value. By default, this value will be 192.0.2.1.

Click "Save" to store and active settings.

### 9.5.3 Port Filtering Profile

Set Port filtering profile, click "Advanced Configure">"IGMP Snooping">"Port Filtering Profile"

- > Information & Status
- > Network Admin
- > Port Configure
- > PoE

  - ▼ IPMC Profile
    - Profile Table
    - **Address Entry**

### IPMC Profile Address Configuration

Navigate Address Entry Setting in IPMC Profile by  entries per page.

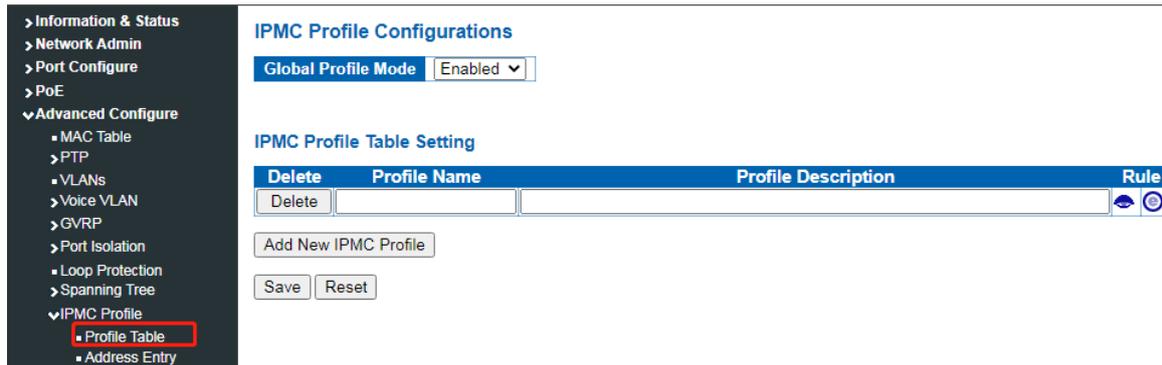

Delete	Entry Name	Start Address	End Address
Delete			

Configuration Instruction:

Object	Instruction
Entry Name	Input the name of the group to be filtered
Start Address	Input the start group address
End Address	Input the end group address

Click “ Save ” to enable your setting.

Bind the filter multicast list, click “ Advanced Configure ”>“ IPMC Profile ”>“ Profile Table

Object	Instruction
Entry Name	Choose created Address Entry by dropping down the menu.
Action	Choose Deny / Permit
Log	Enable / Disable

## 9.7 IPV6 MLD Snooping

IPV6 MLD Snooping is a multicast management and control mechanism working on the Layer 2 Ethernet switch.

When enable IPV6 MLD Snooping, switch receives the IPV6 MLD message by listening for each interface, to exchange interface and multicast group address mapping relationship, and according to establish the mapping relationship to forward the multicast data flow.

### 9.7.1 Basic Configuration

Click “ Advanced Configure ”>“ IPV6 MLD Snooping ”>“ Basic Configuration ”, to check the configuration information of IPV6 MLD Snooping.

### MLD Snooping VLAN Configuration

Start from VLAN 1 with 20 entries per page.

Delete	VLAN ID	Snooping Enabled	Querier Election	Compatibility	PRI	RV	QI (sec)	QRI (0.1 sec)	LLQI (0.1 sec)	URI (sec)
Delete		<input type="checkbox"/>	<input checked="" type="checkbox"/>	MLD-Auto	0	2	125	100	10	1

Configuration Instruction:

Object	Instruction
Snooping Enable	Enable the per-VLAN IGMP Snooping. Up to 32 VLANs can be selected for IGMP Snooping.s
Querier(Querier Election)	Enable to join MLD Querier election in the VLAN. Disable to act as an MLD Non-Querier.

Click " Save " to enable your setting.

## 9.8 ERPS

ERPS (Ethernet Ring Protection Switching), it integrates OAM function and APS protocol. If the ring network was interrupted accidentally, the fault recovery times could be less than 50ms to quickly bring the network back to normal operation. ITU-T G.8032 is the first industry standard for ERPS.

Note: Before enable ERPS, STP of ring port should be disabled. After Click "Advanced Configure">"ERPS", followed screen will appear.

Configuration object and description is:

Object	Description
Ring ID	ERPS Ring ID
East Port	Number of the port which participate in this Ring protection.
West Port	Number of the other port which participate in this Ring protection.
Ring Type	Available selection: "Major Ring " or "Sub Ring ". Only in case of Multi Ring application, "Sub Ring " is required to configure. Default Ring Type: "Major Ring ". Only if there is multi ring application, it is required to set.
Interconnected Node	In Multi Ring application, Interconnected Node is the node that connect 2 or more rings.
Major Ring ID	In Single Ring application, Major Ring ID is same as Ring ID. In Multi Ring application, Sub Ring has to be type as Major Ring ID.
R-APS VLAN(1-4094)	Define VLAN for R - APS VLAN.

Click "Add New Ring Group"to create a new ERPS ring application.Click "Save" to store and active settings.

After click the number under "Ring ID", it will go to the page for Ring Configuration as followed screen:

Add New Entry Back

Save Reset

Click "Add New Entry" to create a new entry. Click "Save" to store and active settings.

## 9.9 LLDP

Link Layer Discovery Protocol (LLDP) is used to discover basic information about neighboring devices on the local broadcast domain. LLDP is a Layer 2 protocol that uses periodic broadcasts to advertise information about the sending device. Advertised information is represented in Type Length Value (TLV) format according to the IEEE 802.1ab standard, and can include details such as device identification, capabilities and configuration settings. LLDP also defines how to store and maintain information gathered about the neighboring network nodes it discovers.

After Click "Advanced Configure">"LLDP" , followed screen will appear.

Screen Configuration object and description is:

Object	Description
LLDP Parameters	Here allows the user to inspect and configure the current LLDP port settings: Tx Interval: Transmission Interval Time Tx Hold: Hold time Multiplier Tx Delay: Transmit Delay Time Tx Remit: Transmit Remit Time
Mode	Select LLDP messages transmit and receive modes for LLDP Protocol DataUnits. Options are Tx only, Rx only, Enabled, and Disabled.
Optional TLVs	To configure the information included in the TLV field of advertised messages. When followed option is checked, corresponding information will be included in LLDP information transmitted. Port Descr: Port Description Sys Name: System Name Sys Descr: System Description Sys Capa: System Capability Mgmt Addr: Management Address

Click "Save" to store and active settings.

## 9.10 Loop Protection

Loop protection is to avoid broadcast loops. After Click "Advanced Configure">"Loop Protection" ,

followed screen will appear.

Action	Action take when the port detected loop. There are 3 types of action for users toselect, Shutdown port, Shutdown port and Log, Log Only.
Tx Mode	To enable or disable Tx.

Click "Save" to store and active settings.

## 10 QoS Configure

Quality of Service (QoS) is an advanced traffic prioritization feature that allows you to establish control over network traffic. QoS enables you to assign various grades of network service to different types of traffic, such as multi-media, video, protocol-specific, time critical, and file-backup traffic. This function n can't only reserve bandwidth, but also limit other traffic that is not so important.

### 10.1 QoS Port Classification

After Click "QoS Configure">"Port Classification" , followed screen will appear.

Port	CoS	DPL	PCP	DEI	Tag Class.	DSCP Based	Address Mode
*	<>	<>	<>	<>		<input type="checkbox"/>	<>
1	0	0	0	0	Disabled	<input type="checkbox"/>	Source
2	0	0	0	0	Disabled	<input type="checkbox"/>	Source
3	0	0	0	0	Disabled	<input type="checkbox"/>	Source
4	0	0	0	0	Disabled	<input type="checkbox"/>	Source
5	0	0	0	0	Disabled	<input type="checkbox"/>	Source
6	0	0	0	0	Disabled	<input type="checkbox"/>	Source

8	0	0	0	0	Disabled	<input type="checkbox"/>	Source
9	0	0	0	0	Disabled	<input type="checkbox"/>	Source
10	0	0	0	0	Disabled	<input type="checkbox"/>	Source

Save Reset

Configuration object and description is:

Object	Description
CoS	Controls the default class of service, ranging from 0 (lowest) to 7 (highest). All frames are classified to a CoS. There is a one to one mapping between CoS,queue and priority. A CoS of 0 (zero) has the lowest priority The classified CoS can be overruled by a QCL entry. Note: If the default CoS has been dynamically changed, then the actual default CoS isshown in parentheses after the configured default CoS.
DPL	Controls the default drop precedence level. All frames are classified to a drop precedence level. The classified DPL can be overruled by a QCL entry.
PCP	Controls the default PCP value. All frames are classified to a PCP value. If the port is VLAN aware and the frame is tagged, then the frame is classified to thePCP value in the tag. Otherwise the frame is classified to the default PCP value.
DEI	Controls the default DEI value. All frames are classified to a DEI value. If the port is VLAN aware and the frame is tagged, then the frame is classified to theDEI value in the tag. Otherwise the frame is classified to the default DEI value.
Address Mode	The IP/MAC address mode specifying whether the QCL classification must be basedon source (SMAC/SIP) or destination (DMAC/DIP) addresses on this port. The allowed values are:

	Source: Enable SMAC/SIP matching. Destination: Enable DMAC/DIP matching.
--	--

Click "Save" to store and active settings.

## 10.2 Port Policing

After Click "QoS Configure">"Port Policing" , followed screen will appear.

To change system login password of the switch, please click "Security Configure">"Password".

User Name	Privilege Level
admin	15

Add New User

Configuration Screen Click "Save" to store and active settings.

## 11.2 802.1X

In the 802.1X-world, the user is called the supplicant, the switch is the authenticator, and the RADIUS server is the authentication server. The switch acts as the man-in-the-middle, forwarding requests and responses between the supplicant and the authentication server. Frames sent between the supplicant and the switch are special 802.1X frames, known as EAPOL (EAP over LANs) frames. EAPOL frames encapsulate EAP PDUs (RFC3748). Frames sent between the switch and the RADIUS server are RADIUS packets.

RADIUS packets also encapsulate EAP PDUs together with other attributes like the switch's IP address, name, and the supplicant's port number on the switch. EAP is very flexible, in that it allows for different authentication methods, like MD5-Challenge, PEAP, and TLS. The important thing is that the authenticator (the switch) doesn't need to know which authentication method the supplicant and the authentication server are using, or how many information exchange frames are needed for a particular method. The switch simply encapsulates the EAP part of the frame into the relevant type (EAPOL or RADIUS) and forwards it.

When authentication is complete, the RADIUS server sends a special packet containing a success or failure indication. Besides forwarding this decision to the supplicant, the switch uses it to open up or block traffic on the switch port connected to the supplicant.

The IEEE 802.1X standard defines a client-server-based access control and authentication protocol that restricts unauthorized clients from connecting to a LAN through publicly accessible ports. The authentication server authenticates each client connected to a switch port before making available any services offered by the switch or the LAN.

Until the client is authenticated, 802.1X access control allows only Extensible Authentication Protocol over LAN (EAPOL) traffic through the port to which the client is connected. After authentication is successful, normal traffic can pass through the port.

This switch supports 802.1X port-based authentication. In this page, user can configure 802.1X. After click "Security Configure">"802.1X", followed screen will appear.

Click "Save" to store and active settings.

## 11.3 DHCP Snooping

### 11.3.1 DHCP Overview

DHCP protocol is widely used to dynamically allocate reusable network resources, such as IP address. A typical process of DHCP to obtain IP is as following:

DHCP Client sent DHCP DISCOVER message to DHCP Server, if Client did not receive respond from server within a period of time, it will resend DHCP DISCOVER message.

After received DHCP DISCOVER message, DHCP Server will assign sources (IP address for example) to client, and then send DHCP OFFER message to DHCP Client.

After received DHCP OFFER message, DHCP Client send DHCP REQUEST to ask for server lease, and notify the other servers that it has accepted this server to assign addresses.

After received DHCP REQUEST, server will verify whether resource can be allocated. If OK, it will send DHCP ACK message; If not OK, it will send DHCP NAK message. After received DHCP ACK message, start using the source which server assigned. If received DHCP NAK, DHCP Client will resend DHCP DISCOVER message.

### 11.3.2 About DHCP Snooping

The addresses assigned to DHCP clients on insecure ports can be carefully controlled using the dynamic bindings registered with DHCP Snooping. DHCP snooping allows a switch to protect a network from rogue DHCP servers or other devices which send port-related information to a DHCP server. This information can be useful in tracking an IP address back to a physical port.

#### Command Usage

- Network traffic may be disrupted when malicious DHCP messages are received from an outside source. DHCP snooping is used to filter DHCP messages received on a non-secure interface from outside the network or firewall. When DHCP snooping is enabled globally and enabled on a VLAN interface, DHCP messages received on an untrusted interface from a device not listed in the DHCP snooping table will be dropped.
- Table entries are only learned for trusted interfaces. An entry is added or removed dynamically to the DHCP snooping table when a client receives or releases an IP address from a DHCP server. Each entry includes a MAC address, IP address, lease time, VLAN identifier, and port identifier.
- When DHCP snooping is enabled, DHCP messages entering an untrusted interface are filtered based upon dynamic entries learned via DHCP snooping.
- If a DHCP packet from a client passes the filtering criteria, it will only be forwarded to trusted ports in the same VLAN.
- If a DHCP packet is from server is received on a trusted port, it will be forwarded to both trusted and untrusted ports in the same VLAN.
- If the DHCP snooping is globally disabled, all dynamic bindings are removed from the binding table.

### 11.3.3 DHCP Snooping Configure

After click "Security Configure" > "DHCP" > "Snooping Setting", following screen will appear.

**DHCP Snooping Configuration**

Snooping Mode: Disabled

**Port Mode Configuration**

Configuration object and description is:

Object	Description
DHCP Snooping Mode	Click drop-down menu to enable or disable DHCP Snooping
Port Mode	Indicates the DHCP snooping port mode. Possible port modes are: Trusted: Configures the port as trusted source of the DHCP messages. Untrusted: Configures the port as untrusted source of the DHCP messages.

Click "Save" to store and active settings.

## 11.4 IP&MAC Source Guard

IP&MAC Source Guard is a secure feature used to restrict IP traffic on DHCP snooping untrusted ports by filtering traffic based on DHCP Snooping Table or manually configured IP Source Bindings. It helps prevent IP spoofing attacks when a host tries to spoof and use the IP address of another host.

### 11.4.1 Port Configuration

In this page, user can make IP&MAC Source Guard Port Configuration. After click "Security Configure" > "IP & MAC Source Guard" > "Configuration", followed screen will appear.

**IP Source Guard Configuration**

Mode:

**Port Mode Configuration**

Port	Mode	Max Dynamic Clients
*	<>	<>

Port Mode	Click drop-down menu to enable or disable the IP&MAC Source Guard function for corresponding port.

Max Dynamic Clients	Click drop-down menu to select Max Dynamic Clients. Available options: Unlimited,0, 1, 2.
---------------------	---

Click "Save" to store and active settings.

### 11.4.2 Static Table

In this page, user can manually set Static Table of IP&MAC Guard to fulfill controlling function to port. After click "Security Configure "> "IP&MAC Source Guard "> "Static Table ", followed screen will appear.

The screenshot shows the configuration interface for the Static IP Source Guard Table. On the left is a dark sidebar with a navigation tree. The 'Static Table' option is selected and highlighted with a red box. The main area is titled 'Static IP Source Guard Table' and contains a table with the following structure:

Delete	Port	VLAN ID	IP Address	MAC address
<input type="button" value="Delete"/>	1	<input type="text"/>	<input type="text"/>	<input type="text"/>

Below the table, there is an 'Add New Entry' button (highlighted with a red box), and 'Save' and 'Reset' buttons at the bottom.

Configuration object and description is:

Object	Description
Port	Click drop-down menu to select which port should be fixed.
VLAN	Type VLAN ID that should be fixed to
IP Address	Type IP Address that should be fixed to
MAC Address	Type Mac Address that should be fixed to

Click "Add New Entry " button to create a new record. Click "Save" to store and active settings.

### 11.5 ARP Inspection

Dynamic ARP Inspection (DAI) is a secure feature. Several types of attacks can be launched against a host or devices connected to Layer 2 networks by "poisoning" the ARP caches. This feature is used to block such attacks. Only valid ARP requests and responses can go through DUT. A Dynamic ARP prevents the untrust ARP packets based on the DHCP Snooping Database. This page provides ARP Inspection related configuration. Port Configuration

User can make port configuration in this page. After click "Security Configure "> "ARP Inspection "> "Port Configuration ", followed screen will appear.

Configuration object and description is:

Object	Description
Global Mode	Click drop-down menu to enable or disable Global ARP Inspection
Port Mode	Click drop-down menu to enable or disable port-based ARP Inspection
Check VLAN	If you want to inspect the VLAN configuration, you have to enable the setting of "Check VLAN". The default setting of "Check VLAN" is disabled. When the setting of "Check VLAN" is disabled, the log type of ARP Inspection will refer to the port setting. And the setting of "Check VLAN" is enabled, the log type of ARP Inspection will refer to the VLAN setting. Possible setting of "Check VLAN" are: <b>Enabled</b> : Enable check VLAN operation. <b>Disabled</b> : Disable check VLAN operation.
Log Type	Only the Global Mode and Port Mode on a given port are enabled, and the setting of "Check VLAN" is disabled, the log type of ARP Inspection will refer to the port setting. There are four log types and possible types: <b>None</b> : Log nothing. <b>Deny</b> : Log denied entries. <b>Permit</b> : Log permitted entries. <b>ALL</b> : Log all entries.

Click "Save" to store and active settings.

## 11.5.1 VLAN Configuration

After click "Security Configure" > "ARP Inspection" > "VLAN Configuration", followed screen will appear.

Configuration object and description is:

Object	Description
VLAN ID	Indicates the ID of this particular VLAN
Log Type	Click drop-down menu to enable or disable port-based ARP Inspection. Specify ARP Inspection is enabled on which VLANs. First, you have to enable the port setting on Port mode configuration web page. Only when both Global Mode and Port Mode on a given port are enabled, ARP Inspection is enabled on this given port. Second, you can specify which VLAN will be inspected on VLAN mode configuration web page. The log type also can be configured on per VLAN setting. Possible types are: <b>None</b> : Log nothing. <b>Deny</b> : Log denied entries. <b>Permit</b> : Log permitted entries. <b>ALL</b> : Log all entries.

Click "Add New Entry" button to create a new record of VLAN configuration. Click "Save" to store and active settings.

## 11.5.2 Static Table

User can manually configure ARP Inspection Static Table to control port. After click "Security Configure" > "ARP Inspection" > "Static Table", followed screen will appear.

The screenshot displays the configuration interface for Static ARP Inspection. On the left, a dark sidebar menu lists various configuration options, with 'Security Configure' expanded to show 'ARP Inspection' sub-items: Port Configuration, VLAN Configuration, Static Table, and Dynamic Table. The main content area is titled 'Static ARP Inspection Table' and features a table with the following structure:

Delete	Port	VLAN ID	MAC Address	IP Address
<input type="button" value="Delete"/>	1 ▾	<input type="text"/>	<input type="text"/>	<input type="text"/>

Below the table, there is an 'Add New Entry' button and 'Save' and 'Reset' buttons.

Configuration object and description is:

Object	Description
Port	Click drop-down menu to select which port should be fixed.
VLAN	Type VLAN ID that should be fixed to
IP Address	Type IP Address that should be fixed to
MAC Address	Type Mac Address that should be fixed to

Click "Add New Entry " button to create a new record. Click "Save" to store and active settings.

## 11.6 ACL

ACL is an acronym for Access Control List. It is the list table of ACEs, containing access control entries that specify individual users or groups permitted or denied to specific traffic objects, such as a process or a program. Each accessible traffic object contains an identifier to its ACL. The privileges determine whether there are specific traffic object access rights.

ACL implementations can be quite complex, for example, when the ACEs are prioritized for the various situation. In networking, the ACL refers to a list of service ports or network services that are available on a host or server, each with a list of hosts or servers permitted or denied to use the service. ACL can generally be configured to control inbound traffic, and in this context, they are similar to firewalls.

### 11.6.1 ACL Ports Configure

After click "Security Configure "> "ACL "> "Ports ", followed screen will appear.

Port	Policy ID	Action	Rate Limiter ID	EVC Policer	EVC Policer ID	Port Redirect	Mirror	Logging	Shutdown	State	Counter
*	0	<>	<>	<>	1	Disabled Port 1 Port 2	<>	<>	<>	<>	*
1	0	Permit	Disabled	Disabled	1	Disabled Port 1 Port 2	Disabled	Disabled	Disabled	Enabled	0
2	0	Permit	Disabled	Disabled	1	Disabled Port 1 Port 2	Disabled	Disabled	Disabled	Enabled	0
3	0	Permit	Disabled	Disabled	1	Disabled Port 1 Port 2	Disabled	Disabled	Disabled	Enabled	0
4	0	Permit	Disabled	Disabled	1	Disabled Port 1 Port 2	Disabled	Disabled	Disabled	Enabled	4607
5	0	Permit	Disabled	Disabled	1	Disabled Port 1 Port 2	Disabled	Disabled	Disabled	Enabled	0
6	0	Permit	Disabled	Disabled	1	Disabled Port 1 Port 2	Disabled	Disabled	Disabled	Enabled	0
7	0	Permit	Disabled	Disabled	1	Disabled Port 1 Port 2	Disabled	Disabled	Disabled	Enabled	0

Configuration object and description is:

Object	Description
Action	There are 2 available options: <b>Permit</b> : that specific port allows data going through. <b>Deny</b> : that specific port forbid data going through.
Rate Limiter ID	Port's fixed Rate Limiter ID, please go to <a href="#">Rate Limiter Configuration</a> for more details.
Port Redirect	Select which port frames are redirected on. The allowed values are <b>Disabled</b> or a specific port number and it can't be set when action is permitted. The default value is "Disabled".
Mirror	Specify the mirror operation of this port. The allowed values are: <b>Enabled</b> : Frames received on the port are mirrored. <b>Disabled</b> : Frames received on the port are not mirrored.The default value is "Disabled".
Logging	<b>Enabled</b> or <b>Disabled</b> Log
Shut Down	Specify the port shut down operation of this port. The allowed values are: <b>Enabled</b> : If a frame is received on the port, the port will be disabled. <b>Disabled</b> : Port shut down is disabled.The default value is "Disabled". Note: The shutdown feature only works when the packet length is less than 1518(withoutVLAN tags).
State	Specify the port state of this port. The allowed values are: <b>Enabled</b> : To reopen ports by changing the volatile port configuration of the ACL usermodule. <b>Disabled</b> : To close ports by changing the volatile port configuration of the ACL user module.The default value is "Enabled".
Counter	Counts the number of frames that match this rule.

Click "Save" to store and active settings.

## 11.6.2 Rate Limiter Configuration

User can make ACL Rate limiter configuration in this page. After click "Security Configure "> "ACL "> "Rate Limiter ", followed screen will appear.

## 12 Diagnostics

### 12.1 Ping Test

Ping is a little program that can issue ICMP Echo packets to the IP address you defined. Destination node will respond to those packets sent from switch. So Ping test is to troubleshoot IP connectivity issues.

After click "Diagnostics "> "Ping ", followed screen appear.

Configuration object and description is:

Object	Description
IP Address	The destination IP Address that needed to Ping
Ping Length	Input a number between 1 and 1452. Default: 56
Ping Count	The times for inputting Ping IPv4 address or IPv6 address (Number of echo requests to send). User can input a number between 1 and 60.
Ping Interval	Interval time for Ping (Send interval for each ICMP packet)

Click "Start " button to start Ping testing.

### 12.2 Cable Diagnostics

The Cable Diagnostics performs tests on 10/100/1000BASE-Tcopper cables. These functions have the ability to identify the cable length and operating conditions, and to isolate a variety of common faults that can occur on the Cat5 twisted-pair cabling.

After click "Diagnostics "> "Cable Diagnostics ", followed screen will appear.

Cable Status									
Port	Pair A	Length A	Pair B	Length B	Pair C	Length C	Pair D	Length D	
1	--	--	--	--	--	--	--	--	--
2	--	--	--	--	--	--	--	--	--
3	--	--	--	--	--	--	--	--	--

7	--	--	--	--	--	--	--	--	--
8	--	--	--	--	--	--	--	--	--

Figure 8-2 Cable Diagnostics Screen Click "Start " button to start "Cable Diagnostics " testing.

## 12.3 CPU Load

This page shows percent of CPU load. After click "Diagnostics "> "CPU Load ", followed screen will appear.

## 13 Maintenance

### 13.1 Restart Device

This page is for restarting switch. After click "Maintenance "> "Restart Device ", followed screen will appear.

Please click "Yes " to restart the switch.

### 13.2 Factory Defaults

This page is for making all settings to factory defaults. After click "Maintenance "> "Factory Defaults ", followed screen will appear.

Please click "Yes " to reset the configuration to Factory Defaults.

### 13.3 Firmware Upgrade

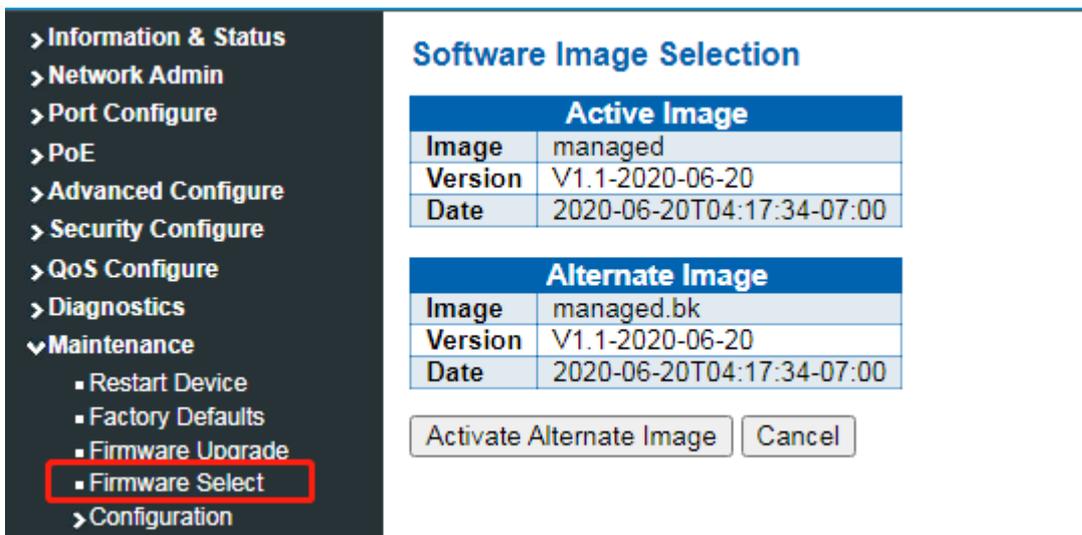

This page is for upgrading system firmware. After click "Maintenance "> "Firmware Upgrade ", followed screen will appear.

Please click "Browse " to select the firmware that needed to upgrade. And then click "Upload " to start upgrading.

### 13.4 Firmware Select

This page is for upgrading system firmware. After click "Maintenance "> "Firmware Upgrade ", followed screen will appear.

Please click "Activate Alternate Image " to select the firmware.

### 13.5 Configuration

In this page, user can download, upload, activated or delete configuration files.

#### 13.5.1 Download Configuration File

After click "Maintenance "> "Download ", followed screen will appear.

### 13.5.3 Activate Configuration

After click "Maintenance "> "Activate ", followed screen will appear. Then user can activate Configuration File.

## 14 Delete Configuration File

After click "Maintenance "> "Delete ", followed screen will appear. Then user can delete Configuration File.

## Appendix 1 Term List

	English Name	Description
A	ARP(Address Resolution Protocol)	A protocol that converts an IP address to a physical address
	Auto-Negotiation	To automatically negotiate the working rate and duplex mode on both ends of the switch and other equipment
B	Broadcast Storm	Excessive broadcast frames are sent across the network via a single port. The response to forward information will stack up in the network, consume excessive network resources, or cause network timeouts
	Broadcasting	The forwarding of data to all nodes in the network
C	CoS (Class of Service)	The 802.1 p priority scheme. The CoS provides a way to add a priority label to the packet and divides the message into eight levels. Range of values: 0 ~ 7
D	DHCP(Dynamic Host Configuration Protocol)	The IP address, subnet mask, gateway and other information are distributed dynamically in the network
	DSCP (DiffServe Code Point)	In a six-bit domain encapsulated in the IP header, the message can be divided into 64 levels. Value range: 0 ~ 63
E	Ethernet	Ethernet USES a total line or star topology and supports a transmission rate of 10Mbps.The new version, called fast Ethernet, can be up to 100Mbps.
F	Flow Control	Flow control enables low-speed equipment to communicate with high speed devices. This kind of flow control is the way to suspend the bag through high speed port to match the speed of the high speed port and the speed of the low-speed port
	Frame	A packet containing the header and tail information required for the physical medium layer.
	Full-Duplex	Using the IEEE802.3 x standard, you can simultaneously receive and send data operations in both directions at one time
H	Half-Duplex	Using the Backpressure standard, you can only receive or send a data operation in one direction at a time
I	IGMP (Internet Group Management Protocol)	The mechanism of establishing and maintaining the relationship between the host and three layer multicast equipment is provided
	IEEE 802.1p	
	IEEE 802.1q	
Q	QoS (Quality of Service)	A technique used to solve problems such as network latency and congestion
T	Trunking	A group of ports is bundled together to form an aggregate group to increase the bandwidth and enhance the reliability of the connection

	ToS (Type of Service)	In an 8-bit domain encapsulated in the IP header, a message representing different priority characteristics is represented
U	UDP(User Datagram Protocol)	An unconnected, unreliable transport layer protocol
	UTP(Unshielded TwistedPair)	There is no shielding media outside the double strand

## Appendix 2 FAQ

Q: Why is it not normal to display a page through a WEB browsing configuration?

A: Before accessing the WEB, remove the cache and COOKIES of IE. Otherwise, it may cause the abnormal.

Q: Forget the Password?

A: Forgetting the login password can be used to initialize the password by restoring the factory settings. Press the button at 10s. Initial user name "admin" and password "admin"

Q: Would be both working if configure by web or CLI?

A : Yes, both ways are working.

Q: Why can't increase bandwidth after configuring Trunk?

A: Please check if the information of Trunk set port is the same, including rate, duplex mode and VLAN etc..

Q: How to deal with the problem of partial ports of switch?

A: When some ports are blocked on the switch, it may be the network cable fault, the network card failure or the switch port failure, users can test by following steps:

Test the failure:

- The connection of the computer and switch ports remains unchanged and replace other network cables.
- The network cable and switch port remains unchanged and change the computer;
- The network cable and computer remain unchanged and replace the switch ports.

If confirmed that is caused by the switch port failure, please contact the supplier for maintenance.

Q: What is the order of the port self-adaptive status detection?

A: Port of state testing was conducted in the following order: 1000Mbps full-duplex, 100Mbps full-duplex, 100Mbps half-duplex, 10Mbps full-duplex, 10 Mbps half-duplex. And automatically connect with maximum speed.
