

**References:**

**A Output A and Output B:**

Each output allows a maximum of 10x Wireless Inputs and 6x Wireless Keyfobs to be learnt. The relays will wire directly to an input on the control panel (normally open or normally closed). The outputs should be connected to an input programmed according to the device learnt (e.g. Keyswitch input for keyfobs, or Intruder input for wireless devices)

**B Fault Output:**

This output will activate if there are any of the following faults: **Low Battery / Jamming / Supervision / Tamper**. The output should be connected to an input programmed as 'Fault'.

**C Arm / Disarm Status:**

In order to receive alarm events from learned devices, the 'ARM' terminal should be connected to an output that monitors the ARM/DISARM status of the control panel. The shown dip switch is used to select 0v or 12v applied when the control panel is armed.

**D Learning Inputs:**

It is recommended that all inputs are learnt to one output (e.g. OUTPUT A) and all keyfobs are learnt to the other output (e.g. OUTPUT B) - A dot next to the letter/number indicates that an Input is connected to OUTPUT B.

**E Learning Keyfobs:**

If learning keyfobs, the control panel input should be programmed as a keyswitch.

**F Signal Strength Indicator:**

Shows the following for each input learned: 'A':Excellent. 'B':Good. 'C':Bad. '---':Waiting for response/out of range

**G Event Log /History:** (Events display in realtime AND in Event logs)

**H Clearing the Event Log | Deleting Inputs | Deleting Keyfobs**

**K Pulse Outputs:**

**keyfob:** Pressing **I** or **II** on the keyfob will activate the relay for the pulse time (3 or 60 seconds).

**Input:** The output will activate for the pulse time (3 or 60 seconds) after an input has activated.

Pressing **II** will display the UR2 status  
**RED LED = ARMED, GREEN LED = DISARMED, ORANGE LED = FAULT**

**L Toggle Outputs:**

**Keyfob:** Pressing only the **I** button on the keyfob will activate the relay.

Pressing only the **II** button will deactivate the relay.

Pressing **I** will display the error LED (blinks orange 4 times).

**Input:** The output will activate after an input has activated. The output will only deactivate once the input has been activated a second time.

Pressing **II** will display the UR2 status (same as pulse mode).

**M Walk Test Mode:**

The channel relay will open at the end of a successful walk test.

**Technical Information Summary:**

|                          |   |
|--------------------------|---|
| Supply Voltage:          | 9V - 15V                                    |
| Current Consumption:     | 80mA (min) - 400mA(max, all outputs active) |
| Output A:                | 3A @ 30VDC                                  |
| Output B:                | 3A @ 30VDC                                  |
| Fault:                   | 3A @ 30VDC                                  |
| Arm / Disarm status:     | 0V (0V ARM), 9-15V (12V ARM)                |
| Radio Frequency:         | 868MHz, FM Transceiver Narrow Band          |
| Dimensions Plastic Box:  | 173x125x32mm                                |
| Dimensions PCB:          | 135x90x15mm                                 |
| Operational Temperature: | -10°C to +50°C                              |
| Storage Temperature:     | -40°C to +80°C                              |
| Humidity:                | 85% @ 25°                                   |

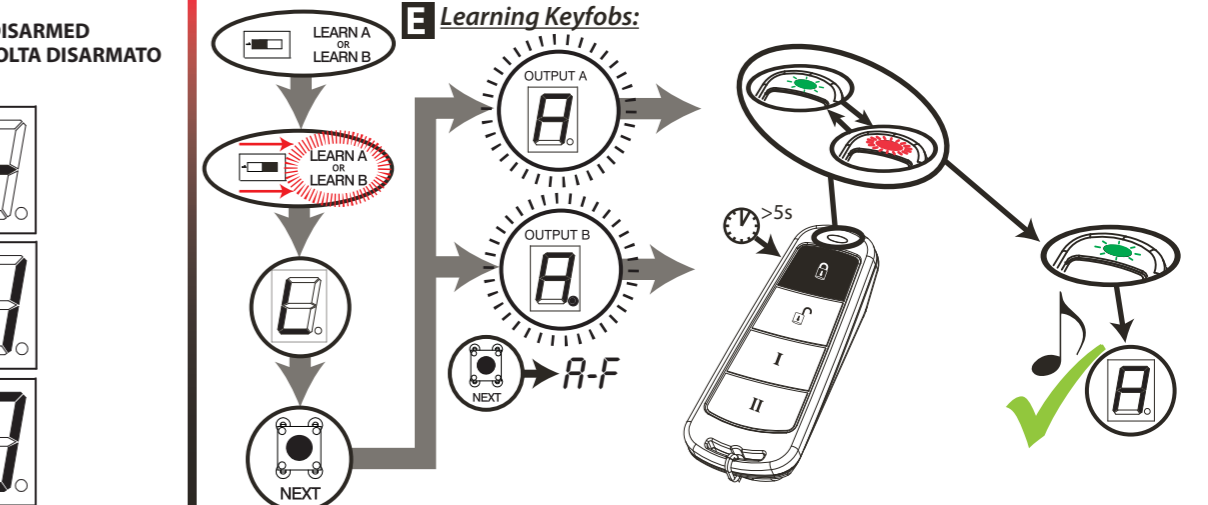

**Product Information**

For electrical products sold within the European Community. At the end of the electrical products life, it should not be disposed of with household waste. Please recycle where facilities exist. Check with your Local Authority or retailer for recycling advice in your country.  
To prevent possible damage to components, any static charge on your body needs to be eliminated before touching the inside of the unit. This can be accomplished by touching some grounded/earthed metallic conductor such as a radiator/pipework immediately before handling the product.

**Warranty**

This product is sold subject to our standard warranty conditions and is warranted against defects in workmanship for a period of two years. In the interest of continuing care and design, Pyronix Ltd reserves the right to amend specifications, without giving prior notice. Please see the control panels programming manuals for further information.
